# As Per NEP 2020

# University of Mumbai

# **Bachelor of Engineering**

First Year Engineering (Semester I & II), Revised Course

(NEP-2020 Scheme) from Academic Year 2024-25

(Common for All Branches of Engineering)

- A- U.G. Certificate in Major Discipline of Engineering/Technology
- B- U.G. Diploma in Major Discipline of Engineering/Technology
- C- B.Voc/B.S.c. in Major Discipline of Engineering/Technology
- D- B.E. in Major Discipline of Engineering/Technology
- E- B.E. ( Hons.) in <u>Major Discipline of Engineering/Technology</u>
- F- B.E. (Hons. With Research) in Major Discipline of Engineering/Technology

Ref: GR dated 20th April, 2023 for Credit Structure of UG

(As per AICTE & NEP 2020 Guidelines with effect from the Academic Year 2024-25 Progressively)

# **Preamble**

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The First Year Engineering course is a broad foundation training program to impart scientific and logical thinking Training to learners in general with a choice of course selection in the Basic sciences and Engineering Sciences. Simultaneously NEP- 2020 objectives demand nurturing the basic skills required for familiarizing within the respective chosen Branch of Engineering by the learner. Keeping this in view, a pool of courses is offered in Basic sciences covering fundamentals required to understand modern engineering practices and emerging trends in technology. Considering the change in pedagogy and the convenience of the stress-free learning process, in the course work under heads of Engineering Sciences, a choice-based subject pool is offered in the second semester. Essentially to give a glimpse of trends in the industry under vocational skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Basic sciences cover Applied Physics and Elective Physics, Applied Chemistry and Elective Chemistry, and Applied Mathematics where a pool of subjects are given for selection, the rationale for the same is that generalized basic science courses are not feasible from learners' point of view. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional, for the purpose Design Thinking is introduced in the First Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

Faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner's learning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the first-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the first year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the First Year of Engineering from the academic year 2024-25. Subsequently, this system will be carried forward for Second Year Engineering in the academic year 2025-26, and for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

Dr. Deven Shah Associate Dean Faculty of Science & Technology

Prof. Shivram S. Garje Dean Faculty of Science & Technology

<sup>\*</sup> Two hours of practical class to be conducted for full class as demo/discussion

Theory / Tutorial 1 credit for 1 hour and Practical 1 credit for 2 hours.

<sup>#</sup> Course evaluation is activity-based which may be individual or group of four students.

# **Semester II**

## Course Objectives: The course is aimed

- 1. To develop the basic Mathematical skills of engineering students that are imperative for effective understanding of engineering subjects. The topics introduced will serve as basic tools for specialized studies in many fields of engineering and technology.
- 2. To provide hands-on experience using SCILAB software to handle applications to real-life problems.

#### Course Outcomes: Students will be able to

- 1. Apply the basic concepts of Complex Numbers and will be able to use them to analyze for engineering problems.
- 2. Apply hyperbolic functions and logarithms in subjects like electrical circuits and electromagnetic wave theory for cutting-edge tools and technology.
- 3. Apply the basic concepts of partial differentiation of function of several variables and will be able to use in subjects like Electromagnetic Theory, Heat and Mass Transfer, etc.
- 4. Apply the concept of Maxima, Minima, and Successive differentiation and will be able to use it for optimization and tuning the systems in emerging and computing areas.
- 5. Apply the concept of Matrices and be able to use it for solving the KVL and KCL in electrical networks in emerging and telecommunications areas.
- 6. Apply the concept of Numerical Methods for solving engineering problems with help of SCILAB software.

| Module | Detailed Contents  | Hrs. | CO<br>Mapping |
|--------|--|------|---------------|
| 01     | <ul> <li>Complex Numbers</li> <li>Pre-requisite: Review of Complex Numbers-Algebra of Complex Numbers, Cartesian, polar and exponential form of complex number, Statement of D'Moivre's Theorem.</li> <li>1.1. Expansion of sin<sup>n</sup>θ, cos<sup>n</sup>θ in terms of sines and cosines of multiples of θ and Expansion of sinnθ, cosnθ in powers of sinθ, cosθ.</li> <li>1.2. Powers and Roots of a complex number.</li> <li># Self-learning topic: Basic of Complex Number.</li> </ul>    | 2 2  | CO1           |
| 02     | Hyperbolic Functions & Logarithms of Complex Numbers  2.1. Circular functions of complex number and Hyperbolic functions. Inverse  Circular and Inverse Hyperbolic Functions. Separation of real and imaginary  parts of all types of Functions. (Simple Examples)  2.2. Logarithm of Complex Number (Simple Examples)  # Self-learning topic: Applications of complex numbers in  | 3    | CO2           |
| 03     | Electrical circuits.  Partial Differentiation  3.1.Partial Differentiation: Function of two and three variables, Partial derivatives of first and higher order. Differentiation of composite function.  3.2.Euler's Theorem on Homogeneous functions with two independent variables (with proof). Deductions from Euler's Theorem. (without proof).  # Self-learning topics: Total differentials, implicit functions, Euler's Theorem on Homogeneous functions with three independent variables. | 3 2  | CO3           |
| 04     | Applications of Partial Differentiation and Successive Differentiation.  4.1.Maxima and Minima of a function of two independent variables, 4.2.Successive differentiation: nth derivative of standard functions. Leibnitz's Theorem (without proof) and simple examples.  # Self-learning topics: Jacobian's of two and three independent variables  (simple problems) Lagrange's Multiplier method.   | 1 3  | CO4           |
| 05     | Matrices Pre-requisite: Inverse of a matrix, addition, multiplication, and transpose of a matrix, symmetric, skew-symmetric Matrix (Only   | 3    |               |

|    | Definition).   | 2 |     |
|----|--|---|-----|
|    | 5.1. Types of Matrices (Hermitian, Skew Hermitian, Unitary,    |   |     |
|    | Orthogonal Matrices and  |   | G0. |
|    | properties of Matrices (without proof)). The rank of a         |   | CO5 |
|    | Matrix using Echelon form, reduction to                        |   |     |
|    | normal form, and PAQ form (Only 3X3 Matrix)                    |   |     |
|    | 5.2.System of homogeneous and non –non-homogeneous             |   |     |
|    | equations, their consistency, and solutions.                   |   |     |
|    | # Self-learning topics: Application of inverse of a matrix to  |   |     |
|    | coding theory.   |   |     |
|    | Reduction to normal form and PAQ form.( m x n Matrix)          |   |     |
|    | Numerical Solutions of Transcendental Equations and            |   |     |
|    | System of Linear Equations and Expansion of Function.          |   |     |
|    | 6.1. Solution of Transcendental Equations: Solution by         | 2 |     |
|    | Newton Raphson method and Regula –Falsi method.                | 2 |     |
| 06 | 6.2. Solution of a system of linear algebraic equations, by    |   |     |
|    | (1) Gauss Jacobi Iteration                                     |   | CO6 |
|    | Method, (2) Gauss Seidel Iteration Method.                     | 2 |     |
|    |  |   |     |
|    | # Self-learning topics: Indeterminate forms, L- Hospital Rule, |   |     |
|    | Gauss Elimination Method, Gauss Jordan Method.                 |   |     |

## Term Work:

General Instructions:

- 1. Batch-wise tutorials are to be conducted. The number of students per batch should be as per University pattern for practicals.
- 2. Students must be encouraged to write SCILAB Programs in tutorial class only. Each Student has to write at least 2 SCILAB tutorials (including print out) and at least 6 class tutorials on entire syllabus.
- 3. SCILAB Tutorials will be based on (i) Gauss Jacobi Iteration Method (ii) Guass Seidal Iteration method (iii) Newton Raphson Method (iv)Regula –Falsi method.

## The distribution of Term Work marks will be as follows -

| 1. | Attendance (Theory and Tutorial)   | 05 marks |
|----|------------------------------------|----------|
| 2. | Class Tutorials on entire syllabus | 10 marks |
| 3. | SCILAB Tutorials                   | 10 marks |

## **Assessment:**

## **Internal Assessment Test (IAT) for 20 marks each:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

## **End Semester Theory Examination:**

- > Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of **four questions** need to be answered

#### **Rationale:**

Most of the engineering branches are being off-spring of basic sciences where physics is playing a pivotal role in concept and understanding of foundation of core engineering branches. This syllabus is developed by keeping in mind, needs of all branches that we offer in University of Mumbai. In the distribution of modules, core physics and its applied form are given priority. Further, it is ensured that these modules will cover prerequisites needed for engineering courses to be introduced in higher semesters as core subjects or as interdisciplinary subjects in respective branches.

## **Course Objectives:**

- 1. To provide students with a basic understanding of laser operation.
- 2. To explain the basic working principle of Optical fiber and its use in communication technology.
- 3. To demonstrate principles of interference in thin film.
- 4. To describe Maxwell's equations and their significance.
- 5. To build a foundation of quantum mechanics needed for modern technology.
- 6. To give exposure to the concept of Fermi level in semiconductors.

## **Course Outcomes:**

- 1. Learners will be able to ILLUSTRATE the use of laser in LiDAR and Barcode reading.
- 2. Learners will be able to APPLY the foundation of fiber optics in the development of modern communication technology
- 3. Learners will be able to determine the wavelength of light and refractive index of liquid using the interference phenomenon.

- 4. Learners will be able to ARTICULATE the significance of Maxwell's equations.
- 5. Learners will be able to RELATE the foundations of quantum mechanics with the development of modern technology.
- 6. Learner will be able to CLASSIFY semiconductors and EXPLAIN variation of Fermi level with temperature and doping concentration.

# **DETAILED SYLLABUS:**

|    | Name of      | Detailed Content  | Hours | CO      |
|----|--------------|---|-------|---------|
|    | Module       |   |       | Mapping |
|    | Prerequisite | Basic knowledge of optics and atomic structure, Wavefront and Huygens principle, reflection and refraction, Interference by division of wavefront, Refractive index of a material, Snell's law, Basics of vector algebra, partial differentiation concepts, Dual nature of radiation, Photoelectric effect, Matter  |       |         |
|    |              | waves, Davisson-Germer experiment.  Intrinsic and extrinsic semiconductors, electrical resistivity and conductivity concepts  |       |         |
| Ι  | Lasers       | Lasers: Spontaneous and stimulated emission, population inversion, pumping, active medium & active center, resonant cavity, coherence length and coherence time, Characteristics of lasers, He-Ne laser: construction and working. Fiber laser Construction and working Application: (i)Elementary knowledge of LiDAR(ii) Barcode reader (iii) Application of laser in metal work | 04    | CO1     |
| II | Fibre Optics | Optical fibers: Critical angle, acceptance angle, acceptance cone, numerical aperture, total internal reflection andpropagation of light, Types of optical  |       | CO2     |

|     |                  | communication, numerical                              |     |     |
|-----|------------------|---|-----|-----|
|     |                  | Interference in thin film of uniform thickness,       |     |     |
|     |                  | conditions of maxima and minima for reflected         |     |     |
|     |                  | system, Conditions for maxima and minima for          |     |     |
| III | Interfenence     | wedge shaped film (qualitative), engineering          | 04  | CO2 |
| 111 | In Thin Films    | applications –  | 04  | CO3 |
|     |                  | (i) Newton's rings for determination of unknown       |     |     |
|     |                  | monochromatic wavelength and refractive Index of      |     |     |
|     |                  | transparent liquid (ii) AntiReflecting Coating        |     |     |
|     |                  | Vector Calculus : Gradient, Divergence, Curl.         |     |     |
|     | El 4 d           | Gauss's law, Amperes' circuital Law, Faraday's law,   |     |     |
| IV  | Electrodyna      | Divergence theorem , Stokes theorem Maxwell's         | 04  | CO4 |
|     | mics             | equations in point form, Integral form and their      |     |     |
|     |                  | significance(Cartesian coordinate only)               |     |     |
|     |                  | de Broglie hypothesis of matter waves, de Broglie     |     |     |
|     |                  | wavelength for electron, Properties of matter waves,  |     |     |
|     |                  | Wave function and probability density,                |     |     |
|     |                  | mathematicalconditions for wave function, problems    |     |     |
| V   | Quantum          | on de Broglie wavelength, Need and significance of    | 06  | CO5 |
| V   | Physics          | Schrödinger's equations, Schrödinger's time           | VV  | COS |
|     |                  | independent and time dependent equations, Energy of   |     |     |
|     |                  | a particle enclosed in a rigidbox and related         |     |     |
|     |                  | numerical problems, Quantum mechanical tunneling,     |     |     |
|     |                  | Principles of quantum computing: concept of Qubit.    |     |     |
|     |                  | Direct and Indirect Band Gap Semiconductors,          |     |     |

| BSL101         | Applied Physics<br>Lab |                             |        |         |             |                   | 25    |      | 25 |
|                | Lau                    |                             |        |         |             |                   |       |      |    |

## Lab Objectives:

- 1. To develop scientific understanding of the physics concepts.
- 2. To develop the ability to explain the processes and applications related to science subjects.
- 3. To apply skills and knowledge in real life situations.
- 4. To improve the knowledge about the theory concepts of Physics learned in the class.
- 5. To improve ability to analyse experimental result and write laboratory report.
- 6. To develop understanding about inferring and predicting.

## Lab Outcomes: Learners will be able to...

- 1. Determine wavelength / divergence of laser beam.
- 2. Determine parameters like numerical aperture / power attenuation of an optical fibre.
- 3. Perform experiments based on interference in thin film and determine radius of curvature of lens / diameter of wire / thickness of paper.
- 4. Calculate basic parameters / constants using semiconductors.
- 5. Determine energygap / resistivity of a semiconductor.
- 6. Learner to understand the concept for virtual lab as per syllabus.

## **List of Experiments. (Minimum five experiments required)**

| Sr No | List of Experiments   | Hrs | LO Mapping |
|-------|---|-----|------------|
| 01    | Determination of wavelength using Diffraction grating. (Laser source)                       | 01  | LO1        |
| 02    | Study of divergence of laser beam   | 01  | LO1        |
| 03    | Determination of Numerical Aperture of an optical fibre.                                    | 01  | LO2        |
| 04    | Measuring optical power attenuation in your plastic optical fiber                           | 01  | LO2        |
| 05    | Determination of radius of curvature of a lens using Newton's ring set up.                  | 01  | LO3        |
| 06    | Determination of diameter of wire/hair or thickness of paper using Wedge shape film method. | 01  | LO3        |
| 07    | Determination of 'h'photo cell  | 01  | LO4        |
| 08    | Determination of 'h' using LED  | 01  | LO4        |
| 09    | Determination of energy band gap of semiconductor.  | 01  | LO5        |

| 10 | Determination of resistivity by four probe method.   | 01 | LO5 |
|----|--|----|-----|
| 11 | Any other experiment based on syllabus may be included, which would help the learner to understand concept. Virtual lab may be developed and used for performing the experiments, after defining a suitable LO | 01 | LO6 |

**Term Work Marks:** 25 Marks (Total marks) = 10 Marks (Experiment) + 10 Marks Project + 5 Marks (Attendance)

**Project work** will be extended to semester-2 as well. In semester 1, a group of four students will be formed; a domain may be provided by faculty, the group will frame a problem statement in consultation with faculty. A PPT presentation with problem statement, preliminary literature survey, execution plan and a probable outcome is to be considered for awarding marks. Proper rubrics must be framed by faculty member

## **Rationale:**

<u>Chemical science</u> has contributed in many ways to most of the Engineering branches where <u>"Environmental Chemistry"</u> is the modern approach to learn impact of Technology on habitat and can be common to all Core Groups, <u>"Engineering Materials"</u> can be prerequisites to many subjects of all core groups and Impact of corrosion on metals as engineering materials is the important area of concern. <u>"Conventional and Non Conventional Energy Study"</u> is the matter of general approach to all Core groups as Energy issue is the most recent concern even for designing computational engines (Include hardware & software energy efficient).

## **Course Objectives:**

- 1) To study Coal as a conventional source of energy.
- 2) To study the effect of corrosion by different mechanisms on metals and methods of corrosion control.

- 3) To recognise importance of alloys and can apply the phase rule on it to study the effect of temperature and composition.
- 4) To introduce important properties of polymers as Engineering material.
- 5) To recognise the composition, properties and functions of various composite materials.
- 6) To study importance of Green Chemistry by comparative study of conventional and Green routes of syntheses, solvents and fuels.

## Course Outcomes: Student will be able to -

- 1) Determine the quality of coal and quantify the oxygen required for combustion of coal.
- 2) Apply different methods to minimize corrosion in industries.
- 3) Interpret various phase transformations of alloy using thermodynamics.
- 4) Use the polymers for specific engineering applications on the basis of the properties.
- 5) Identify different types of composite materials for engineering applications.
- 6) Apply the principles of Green chemistry and study environmental impact for sustainable development

# **Prerequisite:**

- 1) Knowledge about basic difference in Conventional and non-conventional energy sources.
- 2) Knowledge about concepts of Electrochemistry.
- 3) Knowledge of basic properties of metals and nonmetals.
- 4) Knowledge of 12 principles of Green Chemistry

## **DETAILED SYLLABUS:**

| Sr. | Name of    | Detailed Content  | Hours | CO      |
|-----|------------|---|-------|---------|
| No. | Module     |   |       | Mapping |
| I   | Fuels and  | A) cFuel: - Definition, Characteristics of good fuel.   | 04    | CO1     |
|     | Combustion | B) Calorific value (Definition, Types,                  |       |         |
|     |            | Determination, Dulong's formula, Numerical)             |       |         |
|     |            | C) Coal: - Analysis of coal – Proximate analysis,       |       |         |
|     |            | Ultimate analysis, Numerical)                           |       |         |
|     |            | D) Combustion of coal – Numerical                       |       |         |
| II  | Corrosion  | A) Introduction: - Definition, Types of Corrosion –     | 04    | CO2     |
|     |            | i) Dry or Atmospheric Corrosion, ii) Wet or             |       |         |
|     |            | Electrochemical corrosion (In Acidic medium, In         |       |         |
|     |            | Neutral medium)   |       |         |
|     |            | B) Factors affecting rate of corrosion:- i) Position of |       |         |
|     |            | metal in galvanic series, ii) Purity of Metal, iii)     |       |         |
|     |            | Nature of Corrosion product, iv) Temperature, v)        |       |         |
|     |            | pH of medium, vi) concentration of medium, vii)         |       |         |
|     |            | moisture, viii) Relative Cathodic and Anodic            |       |         |
|     |            | area, ix) overvoltage                                   |       |         |
|     |            | C) Methods to control corrosion: - i) Selection of      |       |         |
|     |            | metal, ii) Proper Designing, iii) Cathodic              |       |         |
|     |            | protection, iv) Use of Corrosion Inhibitors, v)         |       |         |
|     |            | Metallic Coating  |       |         |
|     |            | D) Corrosion in Electronic devices                      |       |         |
| III | Alloys     | A) Purpose of making alloys.                            | 04    | CO3     |
|     |            | B) i) Gibbs Phase rule – Statement, Terms involved      |       |         |

| IV | Introductio<br>n to<br>Polymers                             | with examples.  ii) Reduced phase rule, Two-component system (Pb-Ag) & Numerical.  iii) Merits and Limitations of Phase rule.  A) Macro-molecular science, basic concept of polymers, Chemical bonding in polymers, Classification of Polymers.  B) Properties of Polymers:- i) Molecular weight -  | 05 | CO4 |
|----|---|---|----|-----|
|    |   | Number average molecular weight, Weight average molecular weight, Numerical, ii) Crystallinity - Crystalline and amorphous polymers – Glass transition temperature, iii) Mechanical Properties: Hardness, tensile strength, creep, fatigue, impact resistance (introduction), iv) Electrical properties: dielectric strength, insulation resistance, surface resistivity (Introduction), v) Optical properties: refractive index, transmittance, photoelectric property, colour |    |     |
| V  | Introductio<br>n to<br>Composites                           | <ul> <li>A) Definition, Characteristics of Composites,</li> <li>B) Constituents of Composites – Matrix Phase and Dispersed Phase (Definition and Functions)</li> <li>C) Classification of Composites</li> </ul>   | 04 | CO5 |
| VI | Green<br>Chemistry<br>for<br>sustainable<br>developmen<br>t | A) Comparative study of synthesis of following industrially important molecules by conventional and green route:- i) Indigo dye, ii) Adipic acid, iii) Carbaryl  B) Green Solvents: - characteristics and applications of Supercritical solvents and ionic liquids  C) Green Fuels:- Synthesis and Advantages of i) Biodiesel, ii) Ethanol  | 05 | CO6 |

# **Recommended Books:**

- 1. Engineering Chemistry, Jain and Jain, Dhanpat Rai Publication
- 2. A textbook of Engineering Chemistry, S. S. Dara, S. Chand and Company
- 3. Polymer science: Vasant Gowarikar, Wiley Estern Ltd, new Delhi
- 4. Green Chemistry: V. K. Ahluwalia

## **Assessment:**

**Internal Assessment Test (IAT) for 15 marks each:** 

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

# **End Semester Theory Examination: Question paper format**

- Question Paper will comprise a total of five questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered.

## Lab Objectives:

- 1. To apply knowledge acquired during the theory class in carrying out the experiments for qualitative and quantitative determination.
- 2. To analyse experimental results and write laboratory report.

**Lab Outcomes:** After completion of experiment, the learners will be able to:

- 1. Understand the significance of proximate analysis of coal and determine quality of coal sample.
- 2. Learn various quantitative analytical techniques to determine % of elements from alloy samples.
- 3. Synthesize biodiesel at laboratory level and calculate % atom economy from Green chemistry point of view.

- 4. Learn the effect of various factors on the rate of corrosion.
- 5. Synthesize bioplastic at laboratory level using from Green chemistry.
- 6. Quantitative determination of N2 / Flue gas.

## **Prerequisite:**

- 1. Knowledge of basic safety practices in the Chemistry Laboratory
- 2. Knowledge of Proximate analysis of coal
- 3. Knowledge of volumetric analysis

#### **Rationale:**

Engineering mechanics is a branch of science that deals with the behavior of solid bodies when subjected to external forces or loads and the effects of these forces on the bodies. It is a fundamental discipline within engineering and provides the basis for understanding and analyzing various types of structures and mechanisms.

## **Course Objectives:**

- 1. To acquaint with basic principles of centroid and its application
- **2.** To familiarize with the concepts of force, moment, Resultant and Equilibrium of system of coplanar force.
- **3.** To acquaint with the basic concept of friction and its application in real-life problems.
- **4.** To understand the parameters required to quantify the Kinematics of Particle and Rigid body.
- **5.** To understand the parameters required to quantify the Kinetics of rigid body.
- 6. To acquaint with the basics of Robot kinematics

## **Course Outcomes:**

- 1. Determine the equivalent force-couple system for a given system of forces.(L3)
- 2. Demonstrate the understanding of Centroid and its significance and locate the same. (L3)
- 3. Illustrate the concept of force, moment and apply the same along with the concept of equilibrium in two- and three-dimensional systems with the help of FBD. (L3)
- 4. Calculate position, velocity and acceleration etc. of particle/rigid body using principles of kinematics (L3)
- 5. Analyze particles in motion using force and acceleration, work-energy and impulsemomentum principles (L4)

# **DETAILED SYLLABUS:**

## Lab Objectives:

- 1. To acquaint with basic principles of centroid and its application
- 2. To familiarize with the concepts of force, moment, Resultant and Equilibrium of system of coplanar force.
- 3. To acquaint with the basic concept of friction and its application in real-life problems.
- 4. To understand the parameters required to quantify the Kinematics of Particle and Rigid body.
- 5. To understand the parameters required to quantify the Kinetics of rigid body.
- 6. To acquaint with the basics of Robot kinematics

## **Lab Outcomes:**

- 1. Determine the equivalent force-couple system for a given system of forces (L3)
- 2. Demonstrate the understanding of Centroid and its significance and locate the same. (L3)
- 3. Illustrate the concept of force, moment and apply the same along with the concept of equilibrium in two- and three-dimensional systems with the help of FBD. (L3)
- 4. Calculate position, velocity and acceleration etc of particle and rigid body using principles of kinematics. (L3)
- 5. Analyze particles in motion using force and acceleration, work-energy and impulse-momentum principles (L4)
- 6. Establish the relation between robot joints and parameters (L2)

#### **List of Experiments:**

Minimum six experiments from the following list of which a minimum one should be from dynamics.

| Sr No | List of Experiments   | Hrs | CO<br>mapping |
|-------|---|-----|---------------|
| 01    | Verification of Polygon law of coplanar forces  | 01  | LO1           |
| 02    | Verification of the Principle of Moments (Bell crank lever)   | 01  | LO3           |
| 03    | Determination of support reactions of a Simply Supported Beam.                                      | 01  | LO3           |
| 04    | Determination of coefficient of friction) using inclined plane                                      | 01  | LO3           |
| 05    | Verification of the equations of equilibrium for non-concurrent non-parallel (General)force system. | 02  | LO3           |
| 06    | Collision of elastic bodies (Law of conservation of momentum).                                      | 02  | LO5           |
| 07    | Kinematics of particles. (Uniform motion of a particle, Projectile motion, motion undergravity)     | 02  | LO4           |
| 08    | Kinetics of particles. (collision of bodies)  | 02  | LO5           |

## **Course Objectives:**

- 1. To provide knowledge on fundamentals of DC circuits
- 2. To provide knowledge of single phase and three phase AC circuits.
- **3.** To inculcate fundamental knowledge of  $1-\Phi$  transformer.
- **4.** To provide basic knowledge on fundamentals of DC and AC machines.
- **5.** To provide knowledge of special purpose Diodes.
- **6.** To provide knowledge of Transistor.

## **Course Outcomes:**

- 1) Apply various network theorems to determine the circuit response / behavior.
- 2) Evaluate and analyze  $1-\Phi$  and  $3-\Phi$  AC circuits.
- 3) Understand the construction, operation and applications of 1- $\Phi$  transformers.
- 4) Illustrate the working principle of 3-Φ, 1-Φ Induction motors and DC Motors.
- 5) Study the construction, operation and applications of some special purpose Diodes.
- 6) Study construction, operation and applications of some Transistors.

## **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of<br>Module | Detailed Content  | Hours | CO<br>Mapping |
|------------|-------------------|---|-------|---------------|
| 0          | Prerequisite      | Resistance, inductance, capacitance, series and parallel connections of resistance, concepts of voltage, current, power and energy and its units. Magnetic circuits, MMF, Magnetic field strength, reluctance.  |       |               |
| I          | 01                | DC Circuits: (Only independent sources) Kirchhoff's Laws, Ideal and Practical Voltage and Current Sources, Source Transformation, Mesh and Nodal Analysis (no super node and super mesh) Star-Delta / Delta-Star Transformations, Superposition Theorem, Thevenin's Theorem, Norton's Theorem and Maximum Power Transfer Theorem. | 10    | CO1           |
| II         | 02                | AC Circuits: Generation of alternating voltage, basic definitions, average and RMS values, phasor and phase difference, sums on phasors, Single-phase ac series   | 12    | CO2           |

|     |    | and parallel circuits consisting of R, L, C, RL, RC, RLC combinations, definitions - real, reactive and apparent power, admittance (Y), Series and parallel resonance (only theory). Generation of Three-Phase Voltages, voltage & current relationships in Star and Delta Connections. |    |     |
|-----|----|---|----|-----|
| III | 03 | Single Phase Transformer: (Numerical are not expected) Working principle of single-phase transformer, types of single- phase transformer, transformation ratio, actual (practical) and ideal transformer, Transformer losses, efficiency, applications of transformer.                  | 04 | CO3 |
| IV  | 04 | Electrical Machines: (Numerical are not expected) principle of operation, constructional details, classification and applications of DC Motor, three-phase induction motor, Single-Phase induction motors and BLDC motor  | 05 | CO4 |
| V   | 05 | Special Purpose Diodes: (Numerical are not expected) Characteristics and operation of Zener Diode and application as a voltage regulator. Basic and structure of LED. Application of LED in indicative and lighting displays.   | 04 | CO5 |
| VI  | 06 | Introduction to Transistors: (Numerical are not expected) structure and operation of BJT. BJT configurations (only common emitter). FET structure and operation. Application of BJT and FET in amplification, switching and oscillators.  | 04 | CO6 |

# Lab Objectives:

- 1. To impart the basic concept of network analysis and its application.
- 2. To provide the basic concept of AC circuit analysis and its application.
- 3. To illustrate the operation of the transformer.
- 4. To illustrate the operation of machines.
- 5. To explain the Zener diode voltage regulation characteristic.
- 6. To explain the BJT and FET as switches and amplifiers.

## **Lab Outcomes:**

- 1) Interpret and analyze the behavior of DC circuits using network theorems.
- 2) Perform and infer experiments on single-phase and three-phase AC circuits
- 3) Illustrate the performance of a single-phase transformer
- 4) Illustrate the performance of A.C. machine and DC Motor
- 5) Perform an experiment on voltage regulation characteristics of Special diode
- 6) Perform an experiment on the VI characteristic Transistor.

# List of Experiments.

| Sr No | List of Experiments  | Hrs | LO Mapping |
|-------|--|-----|------------|
| 01    | Basic safety precautions. Introduction and use of measuring instruments - voltmeter, ammeter, multi-meter, oscilloscope. Reallife resistors, capacitors, and inductors | 01  | LO1        |
| 02    | To measure output voltage across load resistor/current through load resistor and verify the result using Mesh and Nodal analysis                                       | 01  | LO1        |
| 03    | Verification of Superposition Theorem.   | 02  | LO1        |
| 04    | Verification Thevenin's and Norton's theorem   | 02  | LO1        |
| 05    | Verification Maximum Power Transfer Theorem.   | 02  | LO1        |
| 06    | To find the resistance and inductance of a coil connected in series with a pure resistance using the voltmeter method  | 02  | LO2        |
| 07    | To measure the relationship between phase and line, currents and voltages in three-phase system (star & delta)   | 02  | LO2        |
| 08    | To demonstrate cut-out sections of the single-phase transformer.   | 02  | LO3        |
| 09    | To demonstrate cut-out sections of the DC machine  | 02  | LO4        |
| 10    | To plot Zener diode voltage regulation characteristics   | 02  | LO5        |
| 11    | To demonstrate the application of LED in indicative and lighting display   | 02  | LO5        |
| 12    | To demonstrate the application of BJT as a switch  | 02  | LO5        |
| 13    | To demonstrate BJT/FET as an amplifier   | 02  | LO6        |

## **Assessment:**

**Term Work:** Term Work shall consist of at least 08 to 10 practicals based on the above list. Also, Term work Journal must include at least 6 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical& Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

## Rationale

This course has been designed to hone the communicative abilities of First Year Engineering students by providing them skill-based training on LSRW (Listening-Speaking-Reading-Writing) to prepare

them for a career in the industry and for competitive exams pertaining to higher studies.

## **Course Objectives -** The learners should be able to:

- 1. Effectively evaluate the dynamics of communication and navigate professional arenas
- 2. Competently acquire active listening skills by comprehending various types of Speech Acts
- 3. Critically analyse communication barriers, audience and purpose to speak proficiently
- 4. Minutely comprehend extensive texts, technical and non-technical, to execute relevant tasks
- 5. Efficiently organize and create purposeful technical writing for professional transaction
- 6. Successfully manage teams, by applying ethical standards to deliver synergistic solutions

## **Course Outcomes -** The learners will be able to:

- 1. Evaluate the dynamics of communication and effectively navigate professional arenas
- 2. Acquire active listening skills by comprehending various types of Speech Acts
- 3. Analyse different communication barriers, audience and purpose, and speak proficiently
- 4. Comprehend extensive texts, technical and non-technical, to execute relevant tasks
- 5. Organize and create purposeful technical writing for professional transactions
- 6. Manage teams successfully, by applying ethical standards to deliver synergistic solutions

## **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of<br>Module                                | Detailed Content   | Hours | CO<br>Mapping |
|------------|--|--|-------|---------------|
| 01         | Module 1-<br>Fundamentals<br>of<br>Communication | <ul> <li>1.1. Basic Concepts of Communication <ul> <li>Definition, Objectives, Postulates</li> </ul> </li> <li>1.2. Process of Communication <ul> <li>Stimulus, Sender, Encoding, Message, Medium, Channel, Receiver, Decoding, Feedback</li> </ul> </li> <li>1.3. Methods of Communication <ul> <li>Verbal (Written &amp; Spoken).</li> <li>Non-verbal cues perceived through the five senses (Visual, Auditory, Tactile, Olfactory, Gustatory)</li> <li>Non-verbal cues transmitted cues through (The body, Voice, Space, Time, Silence)</li> </ul> </li> <li>1.4. Barriers to Communication <ul> <li>Mechanical, Physical, Semantic &amp; Linguistic, Psychological, Socio-cultural</li> </ul> </li> <li>1.5. Organisational Communication</li> </ul> | 08    | CO1           |
|            |  | <ul> <li>Formal (<i>Upward</i>, <i>Downward</i>, <i>Horizontal</i>).</li> <li>Informal (<i>Grapevine</i>)</li> </ul>   |       |               |

| 02 | Module 2 -<br>Developing<br>Basic Listening          | <ul> <li>2.1. Concepts of Active Listening</li> <li>Listening for Details</li> <li>Listening for Gist</li> </ul>  | 02 | CO2 |  |

#### **Assessment:**

# **Internal Assessment Test (IAT) for 15 marks each:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

# **End Semester Theory Examination:**

# Question paper format

- Question Paper will comprise a total of five questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered.

## **Lab Objectives:** The learners should be able to:

- 1. Effectively evaluate the dynamics of communication and navigate professional arenas
- 2. Competently acquire active listening skills by comprehending various types of Speech Acts
- 3. Critically analyse communication barriers, audience and purpose to speak proficiently
- 4. Minutely comprehend extensive texts, technical and non-technical, to execute relevant tasks
- 5. Efficiently organize and create purposeful technical writing for professional transactions
- 6. Successfully manage teams, by applying ethical standards to deliver synergistic solutions

### **Lab Outcomes:** The learners will be able to:

- 1. Apply the understanding of communication dynamics and navigate professional arenas
- 2. Appreciate other's point of view and apply effective listening strategies
- 3. Analyse different communication barriers, audience and purpose to speak proficiently
- 4. Comprehend extensive technical and non-technical texts to execute specific tasks
- 5. Plan and create purposeful technical writing for professional transactions
- 6. Employ ethical standards and managerial skills in various professional situation

### **DETAILED SYLLABUS:**

# **Lab Objectives**

- 1. To impart training to help the students develop engineering skill sets.
- 2. To inculcate respect for physical work and hard labor.
- 3. To get exposure to the interdisciplinary engineering domain.

### **Lab Outcomes:** Learners will be able to...

- 1. Develop the necessary skill required to handle/use different fitting tools.
- 2. Develop skill required for hardware maintenance.
- 3. Able to install an operating system and system drives.
- 4. Able to identify the network components and perform basic networking and crimping.
- 5. Able to prepare the edges of jobs and do simple arc welding.
- 6. Develop the necessary skill required to handle/use different plumbing tools and simple job.

**Lab Objectives:** This subject aims to provide students with an understanding of the role computation can play in solving problems. The Course will be taught using C-Programming Language.

- 1. Understand and use basic terminology in computer programming.
- 2. Use various data types in C programs effectively.
- 3. Design and implement programs involving decision structures, loops, and functions.
- 4. Design Implement Arrays, String, and Structure
- 5. Describe and utilize memory dynamics through the use of pointers.
- 6. Use different data structures and create/update basic data files in C.

### Lab Outcomes: Learners will be able to

- 1. Illustrate the basic terminology used in computer programming.
- 2. Use different data types in a computer program.
- 3. Design programs involving decision structures, loops and functions.
- 4. Implement Arrays, String, and Structure
- 5. Describe the dynamics of memory by the use of pointers.
- 6. Use different data structures and create/update basic data files.

#### **Rationale:**

"The purpose of the education system is to develop good human beings capable of rational thought and action, possessing compassion and empathy..., with sound ethical moorings and values. It aims at producing engaged, productive, and contributing citizens for building an equitable, inclusive, and plural society as envisaged by our Constitution. Education must develop not only cognitive capacities... but also social, ethical, and emotional capacities and dispositions.... Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development... A holistic and multidisciplinary education would aim to develop all capacities of human beings – intellectual, aesthetic, social, physical, emotional, and moral in an integrated manner" [NEP 2020, p 4].

UHV courses are intended to help students to develop a holistic, humane world vision. A self-reflective, explorational methodology is adopted. All content discussed is universal, rational, and verifiable, and leads to harmony.

# Holistic education inculcates the following three aspects in the student:

- 1. Holistic, Humane Vision of Life harmonious individual to cosmos
- 2. **Human Values** human feelings, participation based on holistic vision
- 3. Skills—required to live with these values in mutual relationship at all levels of human existence

### **Course Objectives:**

The objective of the course is:

- 1. Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
- 2. Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
- 3. Strengthening of self-reflection.
- 4. Development of commitment and courage to act.

- 5. Prepare learner for achieving full human potential who can be contribute for developing an equitable and just society, and promoting national development
- **6.** developing clarity of these fundamental universal human values to help the learner in understanding and living by the various specific expressions. E.g., National values enshrined in the Constitution, aspirations articulated in NEP 2020, UN MDGs and SDGs...

**Course Outcomes:** After completion of the course learner will be able to

- 1. Identify basic human aspirations and programme for its fulfilment.
- 2. Express existing reality of Human being
- 3. Explain the values in human-human relationship and program for its fulfilment to ensure mutual happiness.
- 4. Describe harmony in surroundings family and society.
- 5. Explain harmony nature, existence as coexistence and become more responsible in life, in handling problems with sustainable solutions.
- 6. Apply what they have learnt to their own self in day-to-day life and utilize the professional competence for augmenting universal human order, develop holistic technologies, management models and production systems.

**Prerequisite:** There is no prerequisite for this course.

### **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of Module   | Detailed Content  | Hours | CO<br>Mapping |
|------------|--|---|-------|---------------|
| 0          | Prerequisite   | No prerequisite   |       |               |
| I          | Introduction - Need, Basic Guidelines, Content and Process for Value Education | Purpose and motivation for the course, Self-Exploration, Continuous Happiness and Prosperity- the basic Human Aspirations, Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations, Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario, Method to fulfil the above human aspirations.   | 05    | CO1           |
| II         | Understanding<br>Harmony in the<br>Human Being                                 | Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility. the Body as an instrument of 'I', characteristics and activities of 'I' and harmony in 'I', harmony of I with the Body: Self-regulation and Health; correct appraisal of Physical needs, meaning of Prosperity in detail, Programs to ensure Self-regulation and Health. | 04    | CO2           |
| III        | Understanding<br>Harmony in the<br>Family                                      | Understanding values in human-human relationship and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship, the other salient values in relationship  | 07    | CO3           |

| IV | Understanding<br>Harmony in the<br>Society   | Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals, Visualizing a universal harmonious order in society- Undivided Society, Universal Orderfrom family to world family.   | 03 | CO4 |
|----|--|--|----|-----|
| V  | Understanding Harmony in the Nature and Existence - Whole existence as Coexistence | Understanding the harmony in the Nature, Interconnectedness and mutual fulfilment among the four orders of nature, cyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all pervasive space, Holistic perception of harmony at all levels of existence.   | 04 | CO5 |
| VI | Implications of the Holistic Understanding of Harmony on Professional Ethics       | Natural acceptance of human values, Definitiveness of Ethical Human Conduct, Basis for Humanistic Education, Humanistic Constitution and Humanistic. Universal Order, Competence in professional ethics: Ability to utilize the professional competence for augmenting universal human order and identify the scope and characteristics of people friendly and eco-friendly production systems. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems, Strategy for transition from the present state to Universal Human Order. Sum up. | 03 | CO6 |

(In every module one lecture can be used for students sharing and discussion)

### Note:

- 1. This is an **audit course**.
- 2. This course is to be taught by faculty from every teaching department
- 3. Lecture hours are to be used for interactive discussion, placing the proposals about the topics at hand and motivating students to reflect, explore and verify them.
- 4. In the discussions, the mentor encourages the student to connect with one's own self and do self-observation, self-reflection and self-exploration
- 5. One or two periods from each module may be used for tutorials. These are important for the course. The difference is that the laboratory is everyday life, and practical are how you behave and work in real life.
- 6. Depending on the nature of topics, worksheets, home assignment and/or activity can be included. The practice sessions (tutorials) would also provide support to a student in performing actions commensurate to his/her beliefs. It is intended that this would lead to development of commitment, namely behaving and working based on basic human values.

# **Course Objectives**

- 1. The course is aimed to develop the basic Mathematical skills of engineering students that are imperative for effective understanding of engineering subjects. The topics introduced will serve as basic tools for specialized studies in many fields of engineering and technology.
- 2. To provide hands on experience in using SCILAB software to handle applications to real life problems.

### **Course Outcomes:** Students will be able to...

- 1. Apply the concepts of First Order and first degree Differential equation to the problems in the field of engineering.
- 2. Apply the concepts of Higher Order Linear Differential equation to the engineering problems.
- 3. Apply concepts of Beta and Gamma function to solve improper integrals.
- 4. Apply concepts of Double integral of different coordinate systems to the engineering problems.
- 5. Apply concepts of triple integral of different coordinate systems to the

- engineering problems and its application.
  Solve differential equations and integrations numerically using SCILAB software to experimental aspect of applied mathematics.

# **DETAILED SYLLABUS**

| Module | Detailed Contents  | Hrs. | CO<br>Mapping |
|--------|--|------|---------------|
| 01     | Differential Equations of First Order and First Degree 1.1 Exact differential Equations, Equations reducible to exact form by using integrating factors.   | 3    | CO1           |
|        | <ul> <li>1.2 Linear differential equations (Review), equation reducible to linear form, Bernoulli's equation.</li> <li># Self learning topics: Simple application of differential equation of first order and first degree to electrical and Mechanical Engineering problem</li> </ul> | 2    | COI           |
|        | Linear Differential Equations With Constant Coefficients of  |      |               |
| 02     | Higher Order 2.1 Linear Differential Equation with constant coefficient- complementary function, particular integrals of differential  | 3    | CO2           |
|        | equation of the type $f(D)y = X$ where X is $e^{ax}$ , $\sin(ax + b), \cos(ax + b), x^m, e^{ax}V$  | 1    |               |
|        | 2.2 Method of variation of parameters.   |      |               |
|        | # Self learning topics: Cauchy's homogeneous linear differential equation and Legendre's differential equation, Applications of Higher order differential equation.  |      |               |
| 03     | Beta and Gamma Function, Differentiation under Integral sign   | 2    |               |
| 03     | <ul><li>3.1 Beta and Gamma functions and its properties.</li><li>3.2 Differentiation under integral sign with constant limits of integration.</li></ul>  | 2    | CO3           |
|        | # Self learning topics: Rectification of curves.(Cartesian, Polar and Parametric)  |      |               |
|        | Multiple Integration- I Pre-requisite: Tracing of curves   | 2    |               |
| 04     | 4.1 Double integration-definition, Evaluation of Double Integrals.(Cartesian & Polar)  | 2    | CO4           |
|        | <b>4.2</b> Change the order of integration.(No Evaluation)   | 1    |               |
|        | <b>4.3</b> Evaluation of double integrals by changing to polar coordinates   | 2    |               |
|        | Multiple Integration- II   |      |               |
| 05     | <b>5.1</b> Triple integration definition and evaluation (Cartesian, cylindrical  | 2    | CO5           |
|        | <ul> <li>and spherical polar coordinates).</li> <li>5.2 Application of double integrals to compute Area, Mass.</li> <li># Self learning topics: Application of triple integrals to compute</li> </ul>  | 2    |               |

|    | Volume.  |   |     |
|----|--|---|-----|
| 06 | Numerical solution of ordinary differential equations of first order and first degree, and , Numerical Integration                               |   |     |
|    | 6.1 Numerical solution of ordinary differential equation using (a) Euler's method (b) Modified Euler method, (c) Runge-Kutta fourth order method | 3 | CO6 |
|    | <b>6.2</b> Numerical integration-by (a) Trapezoidal (b) Simpson's 1/3rd (c) Simpson's 3/8th rule (all without proof)                             | 1 |     |

#### Term Work:

General Instructions:

- 1. Batch wise tutorials are to be conducted. The number of students per batch should be as per University pattern for practical.
- 2. Students must be encouraged to write SCILAB Programs in tutorial class only. Each Student has to write at least 4 SCILAB tutorials (including print out) and at least 6 class tutorials on entire syllabus.
- 3. SCILAB Tutorials will be based on (i) Euler Method, (ii) Modified Euler Method, (iii) Runge-Kutta Method of fourth order, (iv) Trapezoidal Rule, (v) Simpson's 1/3<sup>rd</sup> Rule (vi) Simpson's 3/8th rule

### The distribution of Term Work marks will be as follows –

| 1 Attendance (Theory and Tutorial    | ) : 05 marks |
|--------------------------------------|--------------|
| 2 Class Tutorials on entire syllabus | s: 10marks   |
| 3. SCILAB Tutorials                  | : 10 marks   |

### **Assessment:**

Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

### **End Semester Theory Examination:**

- Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of **four questions** need to be answered.

### Rationale:

This course discusses basic aspects and working principles of frontier technologies which are in trend and in frontier research. Modules are designed to provide conceptual clarity of technologies of the 21st century ranging from Imaging to Energy Harvesting where AI and Data analytic are going to play an important role. Creative young minds have larger scope to explore in these areas with the skill sets they are going to acquire in having specific training in their selected Branch of engineering.

# **Course Objectives:**

- 1. To demonstrate the use of Solar Power system and basic designing of solar power stations.
- 2. To explain basic working principle of Image sensors and their use and fundamentals of image processing.
- 3. To explain MEMS technology and sensor construction
- 4. To describe various types of fuel cell and its selection
- 5. To provide fundamentals of Energy harvesting
- 6. To discuss nanotechnology applications in Nano computing

### **Course Outcomes:**

- 1. Learners will be able to MEASURE solar Power and CONSTRUCT basic solar power system .[BT 3]
- 2. Learners will be able to MEASURE Chromaticity and ILLUSTRATE colour matching concept..[BT3]
- 3. Learners will be able to ILLUSTRATE use of MEMS sensors {BT2]
- 4. Learners will be able to DESCRIBE various Fuel cells and its components [BT2]
- 5. Learner will be able to ASSIMILATE concept of Energy harvesting and its role in emerging innovative eco friendly applications. [BT2]
- 6. Learner will be able to EXPLAIN AI integration in various nanotechnology applications.[BT2]

### **DETAILED SYLLABUS:**

|     | Name of Module  | Detailed Content                            | Hours | CO      |
|-----|-----------------|---|-------|---------|
|     |                 |   |       | Mapping |

# Lab Objectives:

- 1. To develop scientific understanding of the physics concepts.
- 2. To develop the ability to explain the processes and applications related to science subjects.
- 3. To apply skills and knowledge in real life situations.
- 4. To improve the knowledge about the theory concepts of Physics learned in the class.
- 5. To improve ability to analyze experimental result and write laboratory report.
- 6. To develop understanding about inferring and predicting.

#### Lab Outcomes:

Learners will be able to

- 1. Learn Characteristics and use of Photovoltaic Cell
- 2. Learn Characteristics and use of MEMS sensors
- 3. Learn to use color sensors and Color measurement
- 4. Learn to Calibrate RGB LED
- 5. Learn to use CMOS image sensor
- 6. Learn use of virtual lab and simulation Experiments

# **List of Experiments. (Minimum five experiments required)**

| Sr No | List of Experiments   | Hrs | LO  |
|-------|---|-----|-----|
| 01    | Measurements of V-I characteristics (Load) Photovoltaic Cell  | 01  | LO1 |
| 02    | Study of power out of series and parallel combinations of Photovoltaic cells  | 01  | LO1 |
| 03    | Study of MEMS pressure Sensor   | 01  | LO2 |
| 04    | study of colour sensor  | 01  | LO3 |
| 05    | Study of Chromaticity diagram with RGB led  | 01  | LO4 |
| 06    | Study of directivity and frequency response of MEMS microphone  | 01  | LO2 |
| 07    | Study of CMOS image sensor and Colour calibration   | 01  | LO3 |
| 08    | Study of a piezoelectric electric transducer as energy source   | 01  | LO2 |
| 09    | Study of a Chromaticity & colour matching using Chromatic Vision simulator  | 01  | LO3 |
| 10    | Simulation experiments based on nanotechnology using open source simulation   | 02  | LO6 |
| 11    | Any other experiment based on syllabus may be included, which would help the learner to understand concept. ,after defining a suitable LO | 02  | LO6 |

**Term Work Marks:** 25 Marks (Total marks) = 10 Marks (Experiment) + 10 Marks Project + 5 Marks (Attendance)

**Project work**: Execution of project as per the plan submitted in semester-I, A working model or a simulation model or a study report leading to a conclusion as anticipated in semester –I is required to be used for awarding marks. A proper rubric should be framed.

#### **Rationale:**

Most of the engineering branches are being off-spring of basic sciences where physics is playing a pivotal role in concept and understanding of foundation of core engineering branches. This syllabus is developed by keeping in mind, needs of all branches that we offer in University of Mumbai. In the distribution of modules, core physics and its applied form are given priority. Further, it is ensured that these modules will cover prerequisites needed and will remain aligned to the requirements for a certain group of engineering courses to be introduced in higher semesters as core subjects or as interdisciplinary subjects.

# **Course Objectives:**

- 1. To provide students with a basic understanding of Semiconductors in the field of Basic Engineering.
- 2. To explain basic importance of p-n junction diodes.
- 3. To learn about few special diode important for semiconductor industry.
- 4. To understand the basics of transistors and their applications in the field of electronics.
- 5. To build foundation of Field effect transistors and their applications.
- 6. To give exposure to the upcoming field of Nano technology in the field of solid state physics.

### **Course Outcomes:**

- 1. Learners will be able to **USE** and **DEMOSTRATE** his/her ability earned here to **apply** it to calculate Hall voltage
- 2. Learners will be able to **CALCULATE** barrier potential and **PLOT I-V** characteristics of p-n junction diode.

- 3. Learners will be able to **PLOT** I V characteristics and understand their applications of some special diodes
- 4. Learners will be able to **CALCULATE** current gain and **PLOT I-V** characteristics for CB-CE configurations.
- 5. Learner will be able to **PLOT** I-V characteristics and understand applications of FETs
- 6. Learner will be able to **APPLY** the knowledge of Nano Technology to certain emerging areas of technology.

# **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of Module Detailed Content |   | Hours | CO<br>Mapping |
|------------|---------------------------------|---|-------|---------------|
|            | Prerequisite                    | Band theory of solids Fermi Dirac<br>Distribution function Density of<br>states and   | 1     | -             |
| 1          | Basics of<br>Semiconductors     | Types of semiconductors, Carrier Concentration in Intrinsic Semiconductors, Fermi level of Intrinsic Semiconductors, Variation of Fermi level of Intrinsic Semiconductors, wrttemperature. Extrinsic Semiconductors, Fermi level of Extrinsic Semiconductors, Variation of Fermi level of Extrinsic Semiconductors, wrt temperature and Impurity Concentration, Equation of conductivity with current flow, Hall Effect, Calculation of Hall Voltage. | 4     | CO1           |
| 2          | Junction diode                  | Formation of p-n junction, calculation of barrier potential Diode equation, p-n junction in forward Bias, p-n junction in Reverse bias, Current- voltage curve for p-n junction diode, LED and its working  | 4     | CO2           |
| 3          | Important Diodes                | Working of: Photo diode, solar cell, Zenerdiode, Varactor diode, Gunn diode and their applications.   | 4     | CO3           |
| 4          | Bipolar Junction<br>Transistors | BJT Structure and Operation - BJT structure, Modes of operation, CB, CE I-V characteristics BJT Amplification and Switching - Current gain, BJT as a switch,  | 4     | CO4           |
| 5          | Field Effect<br>Transistors     | Field-Effect Transistors (FETs) - FET types: JFET, MOSFET, Structure and operation MOSFETs  | 6     | CO5           |

|   |                | in Detail - MOSFET structure, Enhancement and depletion modes, Threshold voltage MOSFET Applications - MOSFET as a switch,  |   |     |
|---|----------------|---|---|-----|
| 6 | NanoTechnology | Introduction to Nanotechnology, Properties (optical, Electrical, Structural, Mechanical) Importance of surface to Volume ratio, Bonding in solids (Vander walls interactions), Application: Lithography, Single Electron Transfer (SET), Spin Valves. | 4 | CO6 |

#### Assessment:

### **Internal Assessment Test (IAT) for 20 marks each:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

## **End Semester Theory Examination:**

## **Question paper format**

- Question Paper will comprise a total of five questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)

• A total of **three questions** need to be answered

### Lab Objectives:

- 1. To develop scientific understanding of the physics concepts.
- 2. To develop the ability to explain the processes and applications related to science subjects.
- 3. To apply skills and knowledge in real life situations.
- 4. To improve the knowledge about the theory concepts of Physics learned in the class.
- 5. To improve ability to analyze experimental result and write laboratory report.
- 6. To develop understanding about inferring and predicting.

#### Lab Outcomes:

Learners will be able to..

- 1. Understand the concepts of Hall effect.
- 2. Experimentally obtain I-V Characteristics of various junction diodes.
- 3. Experimentally obtain I-V Characteristics of transistors in various configurations.
- 4. Experimentally obtain I-V Characteristics of FET in configurations
- 5. Experimentally obtain I-V characteristics of special purpose diodes.
- 6. Use virtual lab effectively to perform experiments

# **List of Experiments. (Minimum five experiments required)**

#### **Assessment:**

# **Internal Assessment Test (IAT) for 20 marks each:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

# **End Semester Theory Examination:**

# Question paper format

- Question Paper will comprise a total of five questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered

# **Lab Objectives:**

- 1. To develop scientific understanding of the physics concepts.
- 2. To develop the ability to explain the processes and applications related to science subjects.
- 3. To apply skills and knowledge in real life situations.
- 4. To improve the knowledge about the theory concepts of Physics learned in the class.
- 5. To improve ability to analyze experimental result and write laboratory report.
- 6. To develop understanding about inferring and predicting.

# **Lab Outcomes:**

Learners will be able to:

- 1. Measure certain physical parameters like R.I.,
- 2. Understand function of Solid state sensors.
- 3. Calibrate thermocouple
- 4. Measure physical parameters using ultra sound sensors.
- 5. Use virtual lab effectively to perform experiments

# List of Experiments.

| Sr No | List of Experiments   | Hrs | LO  |
|-------|---|-----|-----|
| 01    | Measurements of R.I of a suitable liquid using Newton's ring Experiment | 1   | LO1 |
| 02    | Measurement of Hall Voltage   | 1   | LO2 |
| 03    | Carrier concentration using Hall Effect                                 | 1   | LO2 |

| 04 | Measuring distance using ultrasonic distance meter flow   | 1 | LO4 |
|----|---|---|-----|
| 05 | Calibration of PT100  | 1 | LO3 |
| 06 | Calibration of J /K type thermocouple   | 1 | LO3 |
| 07 | Simulation experiments based on nanotechnology using open source simulation   | 1 | LO5 |
| 08 | Study and use of pressure transducer  | 1 | LO2 |
| 09 | V-I characteristic of photo diode   | 1 | LO2 |
| 10 | Characteristics of LDR  | 2 | LO2 |
| 11 | Any other experiment based on syllabus may be included, which would help the learner to understand concept. ,after defining a suitable LO | 2 | LO6 |

**Term Work Marks:** 25 Marks (Total marks) = 10 Marks (Experiment) + 10 Marks Project + 5 Marks (Attendance)

**Project work**: Execution of project as per the plan submitted in semester-I, A working model or a simulation model or a study report leading to a conclusion as anticipated in semester –I is required to be used for awarding marks. A proper rubric should be framed.

#### **Rationale:**

<u>Chemical science</u> has contributed in many ways to most of the Engineering branches where <u>"Engineering Materials"</u> such as alloys, ceramics, composites can be prerequisites to many subjects of all core groups. <u>Polymeric materials</u> can be learnt from the perspective of applications as Polymer semiconductor, Polymer batteries which are common in technology.

# **Course Objectives:**

- 1. To study the composition, properties and functions of various alloys
- 2. To learn the types, properties and uses of various Ceramics
- 3. To learn the composition, properties and functions of various Composite materials
- 4. To learn important types, synthesis and uses of plastics and elastomers.
- 5. To study the different types of advanced polymers with their applications.
- 6. To study the types, properties and uses of various Nanomaterials

#### **Course Outcomes:**

#### Student will be able to -

- 1. Identify different types of alloys and use them for specific engineering applications
- 2. Familiar with different types of ceramics and apply them for different engineering purposes
- 3. Identify different types of composite materials for the industrial uses
- 4. Utilize different plastics and elastomers in industries
- 5. Recognize different advanced polymers for specific engineering applications
- 6. Find different nanomaterials for the scientific applications

# **Prerequisite:**

- 1. Knowledge about purpose of making alloys
- 2. Knowledge about Constituents of Composites and their functions.
- 3. Knowledge of basic properties of polymers.

#### **Assessment:**

# **Internal Assessment Test (IAT) for 20 marks each:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

# **End Semester Theory Examination:**

# **Question paper format**

- Question Paper will comprise a total of five questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered

# Lab Objectives:

- 1. To apply knowledge acquired during the theory class in carrying out the experiments for qualitative and quantitative determination.
- 2. To analyse experimental results and write laboratory reports.

#### **Lab Outcomes:**

After completion of experiment, the learners will be able to:

- 1. Learn various quantitative analytical techniques to determine % of elements from alloy samples
- 2. Synthesize UF/PF resin at laboratory level

# **Prerequisite:**

- 1. Knowledge of basic safety practices in Chemistry Laboratory
- 2. Knowledge of volumetric analysis

# **List of Experiments.**

#### Rationale:

<u>Chemical science</u> has contributed in many ways to most of the Engineering branches where <u>"Environmental Chemistry"</u> is the modern approach to learn impact of Technology on habitat and can be common to all Core Groups. <u>"Non-Conventional Energy Study"</u> is the matter of general approach to all Core groups as Energy issue is the most recent concern even for designing computational engines (Include hardware & software energy efficient).

# **Course Objectives:**

- 1. To gain the knowledge of different air pollutants and their control methods.
- 2. To identify water pollutants of different sources and suggest methods for the treatments.
- 3. To study the solid and hazardous waste management methods
- 4. To identify different types of non-conventional energy sources.
- 5. To gain knowledge of biomass energy and processes.
- 6. To demonstrate sustainable practices to make the environment clean

#### **Course Outcomes:**

#### Student will be able to -

- 1. Apply the knowledge of air pollution control to save the environment.
- 2. Analyze the quality of waste water to clean the water bodies
- 3. Identify methods for solid and hazardous waste treatment to protect the health and environment.
- 4. Compare the availability and efficiency of performance and environmental impact of non-conventional energy sources.
- 5. Determine the sources and applications of biomass to save the environment
- 6. Apply the knowledge of sustainable practices in different parts of world to protect the environment

#### **Prerequisite:**

- 1. Knowledge of different types of pollution.
- 2. Knowledge of basics of pollution control
- 3. Knowledge of demerits of conventional energy sources.

# Lab Objectives:

- 1. To apply knowledge acquired during the theory class in carrying out the experiments for qualitative and quantitative determination.
- 2. To analyze experimental results and write laboratory reports.

#### **Lab Outcomes:**

After completion of experiment, the learners will be able to:

- 1. Apply knowledge of various quantitative analytical techniques to determine the hardness and other impurities in water.
- 2. Use pH meter for determination of pH of water samples
- 3. Interpret results of COD to assess pollution level of wastewater.

# **Prerequisite:**

- 1. Knowledge of basic safety practices in Chemistry Laboratory
- 2. Knowledge of volumetric analysis
- 3. Knowledge of BOD & COD of waste water

#### **Rationale:**

This subject is a <u>Common to All Core Groups</u> as this involves basic simulation Design Techniques to understand real world phenomena. It links real world to correlated simulation essential to understand how simulation works with reliability. Generation of data and data analysis with experimentation is the core theme of this subject and can be a <u>choice of all core Groups</u>.

# **Course Objectives:**

- 1. To know the fundamental principles of Computational Chemistry required to solve engineering problems
- 2. Practical implementation of fundamental theory concepts
- 3. To enable the students to understand the role of computers in chemistry
- 4. To study the applications of chemistry in various engineering and technological processes

# **Course Outcomes:**

Student will be able to -

- 1. Understand computational chemistry, distinguishing it from experimental chemistry, and articulate its role within the broader field of chemical sciences.
- 2. Apply mathematical concepts and theories that underpin computational chemistry techniques, such as quantum mechanics and statistical mechanics
- 3. Utilize computers to understand role of computer simulations to understand and solve basic problems in chemistry
- 4. Develop the basic understanding of scientific simulation and modeling
- 5. Apply computational and theoretical chemistry concepts to understand chemistry behind every day and industrial processes
- 6. Apply the computational tools and methodology to represent chemical systems

# **Prerequisite:**

- 1. Basic understanding of chemical principles, including atomic structure, chemical bonding, stoichiometry, and thermodynamics.
- 2. Knowledge of differential and integral calculus, including concepts of limits, derivatives, and integrals.
- 3. Understanding of basic numerical techniques for solving mathematical problems, such as root-finding, numerical integration, and differential equations.
- 4. Familiarity with general scientific software and tools, such as MATLAB and basic knowledge of operating systems (Linux, Windows).

# Lab Objectives:

- 1. To study applications of computational chemistry
- 2. To learn to simulate and predict molecular structures and properties using different kinds of calculations based on quantum and classical physics

#### **Lab Outcomes:**

After completion of experiment, the learners will be able to:

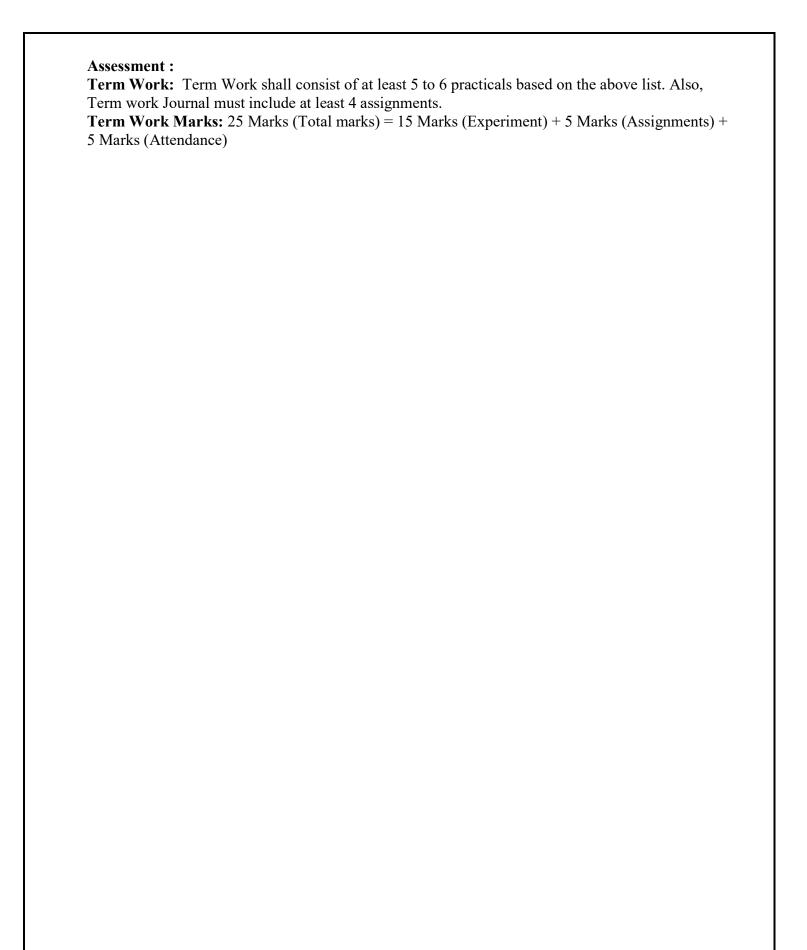

- 1. Attain proficiency in using major computational chemistry software packages (e.g., Gaussian, GAMESS) to conduct simulations and analyze chemical systems.
- 2. Apply principles of Computational Chemistry
- 3. Simulate and predict molecular structures and properties using different kinds of calculations.
- 4. Understand the complementarity of computational and experimental approaches in

- chemistry.
- 5. Develop research skills and problem-solving abilities using computational chemistry techniques.
- 6. Adhere to ethical standards and practices in computational chemistry research.

# List of Experiments.

#### **Rationale:**

Engineering Graphics is an essential subject across all engineering disciplines, as it develops crucial visualization skills, enabling students to comprehend and design complex structures and systems in three dimensions. It facilitates precise technical communication, allowing engineers to convey design ideas, concepts and specifications effectively, which is vital for collaboration in multidisciplinary teams. It is a language engineers, designers, and architects use to convey their ideas to manufacturers, constructors, and stakeholders. This subject enhances problem-solving abilities of students to create and interpret detailed technical drawings, helping to identify and resolve design issues early. Furthermore, it emphasizes accuracy and precision, which are critical in producing exact drawings for fabrication and assembly across all branches of engineering.

#### **Course Objectives:**

- 1. To impart and inculcate proper understanding of the theory of projection.
- 2. To impart the knowledge to read and interpret a drawing
- **3.** To improve the visualization skill.
- **4.** To enable students to represent three-dimensional objects on a two-dimensional surface in a way that accurately conveys their shape, size, and orientation.
- 5. To acquaint students with representing internal features of a three-dimensional object by way of section that accurately conveys their internal orientation.

#### **Course Outcomes:** Learners will be able to ...

- 1. Apply basic concepts of geometrical constructions to create engineering curves.
- 2. Apply the basic principles of projections in Projection of Lines and Planes
- 3. Apply the basic principles of projections in Projection of Solids.
- 4. Apply the basic principles of sectional views in Section of solids.
- 5. Apply the basic principles of projections in converting pictorial views into orthographic Views.

6. Apply the basic principles of projections in converting orthographic Views into isometric drawing.

|------------|---|--|-------|---------------|
| 0          | Prerequisite  | <ol> <li>1.To draw basic geometric shapes like pentagon, hexagon and square (in different orientation).</li> <li>2. Divide a line into equal number of parts.</li> <li>3. Divide a circle into equal number of parts.</li> </ol>   | 01    |               |
|            |   | Comment (Prerequisite syllabus should not be considered for paper setting)   |       |               |
| Ι          | Introduction<br>to<br>Engineering<br>Drawing            | 1.1 Introduction to Engineering Graphics and its significance in Engineering domain. Types of Lines, Dimensioning Systems as per IS conventions. 1.2 Introduction to plain and diagonal scales. 1.3 Engineering Curves: Basic construction of Cycloid, Involutes and Helix (cylinder only).  | 03    | CO1           |
| II         | Projections of<br>Points, Lines<br>and Planes           | 2.1 Projections of Points Projections of points in any quadrants as well as resting on planes.  2.2 Projections of Lines Projections of lines inclined to both the reference planes (Excluding Traces of lines). Simple application based problems on projection of lines.  2.3 Projections of Planes Projections of planes (Triangular, Square, Rectangular, Pentagonal, Hexagonal and Circular) inclined to both the Reference Planes. (Exclude composite planes). | 06    | CO2           |
| III        | Projections of<br>Solids                                | Projections of solids with the axis inclined to one and both reference planes. (prism, pyramid, cylinder and cone only). Triangular to hexagonal prism and pyramids to be considered. Exclude Spheres, Composite, hollow solids and frustum of solids). Use change of position or Auxiliary plane method.  | 06    | CO3           |
| IV         | Sections of<br>Solids and<br>Development<br>of Surfaces | 4.1 Sections of Solids Sections of Prism, Pyramid, Cylinder, & Cone cut by plane perpendicular to at least one reference plane (Exclude Curved Section Plane). Use change of position or Auxiliary plane method. 4.2 @Development of Surfaces Development of lateral surface (only) of prism and pyramid only.   | 08    | CO4           |
| V          | Orthographic<br>Projections                             | 5.1 Orthographic Projections Fundamentals of orthographic projections like concept of quadrants, observer position, horizontal, vertical and profile plane, symbol etc. Different orthographic views, First and Third angle method of projection.  | 09    | CO5           |

|    |                    | Views of a simple machine part as per the first angle projection method recommended by I.S.  5.2 Sectional Orthographic Projections  Fundamentals of sectional projections like concept of section plane, its representation, section lines and its features, need of sectional views, rib and web in section. Types of section and its representation. Different views of a simple machine part as per the first angle projection. |    |     |
|----|--------------------|---|----|-----|
| VI | Isometric<br>Views | Basic concept of isometric projection like why it is called isometric, what does it represents, its need, isometric and non-isometric lines, isometric axes and isometric scale. Difference between isometric projection and isometric views. Conversion of orthographic views to isometric views (Excluding sphere).   | 07 | CO6 |

@ only in Term Work and to be considered for lab course (i.e.; Questions will not be asked in any examination).

# Assessment:

# **Internal Assessment (IA) for 20 marks each:**

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

# **End Semester Theory Examination:**

- > Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from

|   | Module 3 then part (b) must be from any other Module randomly selected from all the modules) | l  |
|---|--|----|
| • | A total of <b>four questions</b> need to be answered   |    |

# Lab Objectives:

- 1. To impart and inculcate proper understanding of the theory of projection.
- **2.** To impart the knowledge to read and interpret a drawing
- **3.** To improve the visualization skill.
- **4.** To enable students to represent three-dimensional objects on a two-dimensional surface in a way that accurately conveys their shape, size, and orientation.
- **5.** To acquaint students with representing internal features of a three-dimensional object by way of section that accurately conveys their internal orientation.
- **6.** To impart basic AutoCAD skills.

#### **Lab Outcomes:** Learners will be able to ...

- 1. Apply basic concepts of geometrical constructions to create engineering curves.
- 2. Apply the basic principles of projections in projection of basic geometric objects.
- 3. Apply the basic principles of projections in projection of regular solid objects.
- 4. Apply the basic principles of projections in converting pictorial views into orthographic Views.
- 5. Apply the basic principles of projections in converting orthographic views into isometric drawing.
- 6. Apply basic AutoCAD skills in construction of views and objects.

# **List of Experiments**

| Sr No | List of Experiments  | Hrs | CO<br>Mapping |
|-------|--|-----|---------------|
| 01    | Two problems on Scale and two problems on Engineering Curves to be drawn on drawing sheet.   | 02  | LO1           |
| 02    | Minimum four problems on Projection of Lines to be drawn on drawing sheet.   | 02  | LO2           |
| 03    | Minimum four problems on Projection of Planes to be drawn on drawing sheet.  | 02  | LO2           |
| 04    | Minimum of two problems on Projection of Solids <i>to be drawn on drawing sheet</i> . Out of two problems one should be on the prism category (includes cylinder) and other should be on the pyramid category (includes cone). | 02  | LO3           |
| 05    | Minimum of two problems on Sections of Solids <i>to be drawn on drawing sheet</i> . Out of two problems one should be on the prism category (includes cylinder) and other should be on the pyramid category (includes cone).   | 02  | LO3           |
| 06    | Minimum two problems on Development of Surfaces <i>to be drawn on drawing sheet.</i> Out of two problems one should be on the prism category (includes cylinder) and other should be on the pyramid category (includes cone).  | 02  | LO3           |
| 07    | Two problems on Orthographic Projections (without section) <i>using</i> drafting software.   | 02  | LO4,<br>LO6   |
| 08    | Two problems on Orthographic Projections (with section) using drafting software.   | 02  | LO4.<br>LO6   |

| •  | Minimum of two problems on Isometric Projections to be drawn    | 02 | LO5  |
|----|---|----|------|
|    | on drawing sheet. Out of the two problems, one should include a |    |      |
| 09 | circular portion and one problem should have a sloping surface. |    |      |
|    | Also, one problem should be solved by natural scale and another |    |      |
|    | problem should be solved by isometric scale.                    |    |      |
| 10 | Minimum two problems on Isometric Projections using drafting    | 02 | LO5, |
| 10 | software.   |    | LO6  |

<sup>\*</sup> Out of four problems from practical numbers 4 and 5 at least one problem should be on cone and cylinder each.

#### Assessment

a) Term Work: Term Work shall consist of all the above mentioned practical. Term work will also include the A3 size sketch book. Problems taught in theory class in A3 size sketch book may be considered for term work. Alternatively subject teacher may give problems on each topic to be solved by students as home assignments in the same A3 size sketch book.

**Term Work Marks:** 25 Marks

- a) Drawing Sheets + CAD printout = 15 Marks
- b) Theory Class A3 size Sketch Book = 5 Marks
- c) Attendance = 5 Marks
- b) Practical Exam: (2 hours/25 Marks)

# End semester Practical exam will be held using CAD software only. This exam will be based on the following syllabus.

- 1. Isometric projections. (One problem, compulsory)
- 2. Orthographic Projection (without section)
- 3. Orthographic Projection (with section)
- \* The examiners may decide the weightage of the questions asked in the practical exam.
- \* Printout of the answers have to be taken preferably in A3 size sheets and should be assessed by external examiner only.
- \* Knowledge of AutoCAD software, concepts of Engineering Graphics related to specified problem and accuracy of drawing should be considered during evaluation.

<sup>\*</sup> All printouts to be taken in the CAD Laboratory. Preferably, use A3 size sheets for print out.

# Course Objectives: The course aims to

- 1. Learn the purpose and significance of data structures, as well as their fundamentals.
- 2. Learn linear and nonlinear data structures, as well as how they are implemented.
- 3. Analyze the data structures, such as stacks, queues
- 4. Learn the terminologies, types and various operations in Linked list
- 5. Explore the fundamentals of Tree and learn about its operations and applications.
- 6. Explore the real time applications of various data structures

# Course Outcomes: After successful completion of the course students will be able to

- 1. Classify and Apply the concepts of Linear and Non-Linear data structures in real life problem solving and apply the operations like insertion, deletion, and traversal operations on them.
- 2. Explore data structures such as Stacks, learn about their operations, and use them to solve problems in a variety of domains.
- 3. Examine Queue data structures and use them to address real-world problems.
- 4. Apply the concept of Linked list to evaluate the problems in a diverse applications
- 5. Analyze and apply the concepts of Trees and their applications in real life problem solving.
- 6. Demonstrate the ability to analyze, construct, implement, and use data structures to solve real-world problems and evaluate their effectiveness.

**Prerequisite:** Concepts in C Programming

| Sr. | Name of Module | Detailed Content | Hours | CO      |
|-----|----------------|------------------|-------|---------|
| No. |                |                  |       | Mapping |
|     |                |                  |       |         |

| 0   | Prerequisite    | Concepts of Functions, Recursion, Arrays, Pointers,         |   |      |
|-----|-----------------|---|---|------|
|     |                 | Structures and C programming constructs.                    |   |      |
| I   | Introduction    | Introduction to Data Structures, Concept of ADT,            | 2 | CO 1 |
|     |                 | Types of Data Structures- Linear, Nonlinear, Static,        |   | CO 2 |
|     |                 | Dynamic and operations on Data Structures.                  |   |      |
| II  | Stack           | Introduction to Stack, Stack as ADT, ADT                    | 4 | CO 1 |
|     |                 | Operations on Stack, Array Implementation of Stack,         |   | CO3  |
|     |                 | Multiple Stacks, Evaluation of Arithmetic                   |   |      |
|     |                 | Expressions.  |   |      |
| III | Queue           | Introduction to Queue, ADT operations on Queue,             | 5 | CO 1 |
|     |                 | Array Implementation of Queue, Types of Queues:             |   | CO 3 |
|     |                 | Circular Queue, Priority Queue, Double Ended                |   |      |
|     |                 | Queue and Multiple Queues                                   |   |      |
|     |                 |   |   |      |
| IV  | Linked List     | Concept of Linked Lists, Linked List v/s Array,             | 6 | CO 1 |
|     |                 | Types of Linked List- Singly linked lists, doubly           |   | CO 4 |
|     |                 | linked lists and circular linked lists. Insertion,          |   |      |
|     |                 | deletion, update and copying operations with Singly         |   |      |
|     |                 | linked lists, doubly linked lists. Implementation of        |   |      |
|     |                 | Stack and Queue using linked list. Reversing a singly       |   |      |
|     |                 | linked list.  |   |      |
| V   | Tree            | Introduction to Trees, Tree Terminologies, Binary           | 5 | CO 1 |
|     |                 | Tree, Binary Tree Representation, Types of Binary           |   | CO 5 |
|     |                 | Tree, Binary Tree Traversals, Binary Search Tree,           |   |      |
|     |                 | Insert, Delete, Search Operations on Binary Search          |   |      |
|     |                 | Tree.   |   |      |
| VI  | Applications of | Stacks: Conversion of Arithmetic Expressions                | 4 | CO 1 |
|     | Data Structures | using Infix, Prefix and Postfix Notations,                  |   | CO 6 |
|     |                 | Reversing a String/List, Parentheses Checker.               |   |      |
|     |                 | <b>Trees</b> : Representing expressions using of Expression |   |      |
|     |                 | tree and Huffman Encoding.                                  |   |      |

8. <u>Data Structure using C Programming - Course (swayam2.ac.in)</u>

#### **Assessment:**

# Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

- > Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of four questions need to be answered

# Lab Objectives: The course aims to

- 1. Learn about the purpose and importance of data structures, as well as their principles.
- 2. Understand linear and nonlinear data structures, as well as their implementation.
- 3. Analyze data structures, such as stacks and queues.
- 4. Study the terminologies, types, and various operations in linked lists.
- 5. Discover the principles of Tree, including its operations and uses.
- 6. Investigate the real-time uses of different data structures.

#### **Lab Outcomes:** After successful completion of the course students will be able to

- 1. Classify and apply linear and non-linear data structure concepts to real-world problem solving, as well as performing operations such as insertion, deletion, and traversal.
- 2. Explore data structures like Stacks, learn about their operations, and apply them to solve issues in a variety of domains.
- 3. Examine queue data structures and apply them to use in diverse real-world applications.
- 4. Apply the concept of linked lists to evaluate problems in a variety of applications.
- 5. Analyze and apply the concepts of Trees and their applications in real life problem solving.
- 6. Demonstrate the ability to analyze, construct, implement, and use data structures to solve real-world problems and evaluate their effectiveness.

**Prerequisite:** Fundamentals of C programming and its concepts like Functions, Recursion, Arrays, Structures and Pointers.

# **DETAILED SYLLABUS:**

| Sr. | Module       | Detailed Content   | Hours | LO      |
|-----|--------------|--|-------|---------|
| No. |              |  |       | Mapping |
| 0   | Prerequisite | Constructs of C like Functions, Recursion, Arrays,         |       |         |
|     |              | Structures and Pointers.                                   |       |         |
| I   | Introduction | Overview of Data Structure, Elementary Data                | 04    | LO 1    |

|-------|--|-----|
| 01. * | Implementation of Insertion and deletion in a specific position in an Array using Function.  | 2   |
| 02.   | Implementation of recursive program.   | 2   |
| 03. * | Array Implementation of Stack.   | 2   |
| 04. * | Array Implementation of Linear Queue.  | 2   |
| 05.   | Array Implementation of Circular Queue.  | 2   |
| 06. * | Implement Singly Linked List.  | 2   |
| 07.   | Implement Doubly Linked List.  | 2   |
| 08. * | Implementation of Double Ended Queue using Linked List.                                      | 2   |
| 09.   | Implementation of Stack using Linked list  | 2   |
| 10. * | Implementation of Binary Search Tree and its traversal methods.                              | 2   |
| 11.   | Program to count Number of leaf nodes, find the biggest and smallest and height of the tree. | 2   |
| 12.   | Implementation of Reversing a List using Stack.  | 2   |
| 13.   | Convert an Infix expression to Postfix expression using stack ADT.                           | 2   |
| 14. * | Program to Evaluate Postfix Expression using Stack ADT.                                      | 2   |

# **List of Assignments:**

| S | Sr No | List of Assignments / Tutorials  | Hrs |
|---|-------|--|-----|
|   | 01    | Assignment covers the topics from first three units (Introduction, Stack and Queue) limited to three Questions                       | 2   |
|   | 02    | Assignment covers the topics from Last three units (Linked list, Tree and Application of Data Structures) limited to three Questions | 2   |

#### **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

| Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus. |     |  |  |  |  |  |

#### **Rationale:**

This course is intended for gaining useful knowledge with respect to principles and procedures related to civil engineering with practical approaches. Civil Engineering structures are made using various engineering materials such as concrete, timber, metals, or their composites. Knowledge of surveying is very useful to all engineers to plan and execute any civil engineering project. The element of civil engineering is to address societal needs like water and shelter by creating safe, efficient, and sustainable infrastructure that also enhances quality of life and economic development.

#### **Course Objectives:**

- 1. To study the basic concepts of civil engineering.
- 2. To study various building material and their significance in the construction activity.
- 3. To introduce the concept of elements of building drawing.
- 4. To develop the concept of basic surveying.
- 5. To understand the concept of water resources engineering
- 6. To understand the concept of transportation engineering

# **Course Outcomes:**

- 1. Compare and contrast different branches of civil engineering in terms of their focus areas and applications.
- 2. Analyse common building materials and their construction applications.
- 3. Interpret and sketch basic building drawings using standard symbols.
- 4. Apply basic surveying principles using instruments for simple measurements.
- 5. Describe the importance of water resources management
- 6. Understand the basics of transportation systems.

Prerequisite: A strong foundation of Mathematics, Physics, Chemistry and Spatial reasoning.

DETAILED SYLLABUS:

| Sr.<br>No. | Name of<br>Module                       | Detailed Content  | Hours | CO<br>Mapping |
|------------|---|---|-------|---------------|
| 110.       | Wiodule                                 |   |       | Mapping       |
| 0          | Prerequisite                            | Spatial reasoning and basics of Mathematics   |       |               |
| I          | Introduction to<br>Civil<br>Engineering | What is Civil Engineering/ Infrastructure? Basics of Engineering and Civil Engineering; Importance of Civil Engineering, Introduction to different disciplines of Civil Engineering; Possible scopes for a career | 02    | CO1           |
|            |   | Early constructions and developments over time; Ancient monuments & Modern marvels; Development of various materials of construction and methods of construction; Works of eminent civil engineers                |       |               |
|            |   | Position of construction industry vis-à-vis other industries, five-year plan outlays for construction; current budgets for infrastructure works   |       |               |
| II         | Building<br>Materials                   | 2.1 Materials: Introduction to construction materials like Stone, Bricks, Lime, Timber, Sand, Aggregates, Mortar, and bitumen.  | 06    | CO2           |
|            |   | Cement: Chemical composition, Hydration of cement, Properties of Portland cement, OPC: PPC, Slag cement and other types of cement and their suitability, Different tests on Cement                                |       |               |
|            |   | 2.3 Concrete: Introduction to Concrete, Grade of concrete. Manufacturing process of concrete, Introduction to RMC plant.  |       |               |
| III        | Building drawing                        | Classification of buildings, Types of loads acting on buildings, building components and their functions and nominal dimensions, signs, and symbols used for different materials and elements of buildings        | 05    | CO3           |
|            |   | Elements of building drawing, Methods of making line drawing and detailed drawing.  3.2 Site plan, floor plan, FSI, elevation and section drawing of small residential building.                                  |       |               |
| IV         | Basics of<br>Surveying                  | Role of Civil Engineer in Surveying, Definition, Working Principles, Scale and 4.1 Mapping, Classification of surveying, Linear measurement, Chain and tapes, field work  | 08    | CO4           |

|    |                            | 4.2  | Angular Measurement: Bearing and Direction, Types of compasses   |     |     |
|----|----------------------------|--|--|-----|-----|
|    |                            | 4.3  | Levelling: Principle of leveling, Instruments for leveling, Methods of reduction.  |     |     |
| V  | Water supply and Sanitary  | Sources of Water and quality standards, Water demands. | 03   | CO5 |     |
|    | Engineering                | 5.2  | Fundamentals of Sanitary Engineering collection and conveyance of refuse, waste water: Introduction to Air pollution, noise pollution. |     |     |
| VI | Transportation Engineering | 6.1  | Role of transportation in national development, Introduction to mass transportation system.  | 02  | CO6 |
|    |                            | 6.2  | Introduction to transportation infrastructure in India, Highways, Railways, Airports and Ports   |     |     |

#### **Assessment:**

#### Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

## **End Semester Theory Examination:**

Question paper format

- Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered

## Lab Objectives:

- 1. To study the basic concepts of civil engineering.
- 2. To study various building material and their significance in the construction activity.
- 3. To introduce the concept of elements of building drawing.
- 4. To develop the concept of basic surveying.
- 5. To understand the concept of water resources engineering
- 6. To understand the concept of transportation engineering

#### **Lab Outcomes:**

- 1) Recall the fundamental role of civil engineering and list its core branches.
- 2) Explain the characteristics of common building materials and their typical applications in construction.
- 3) Use standard symbols to sketch basic building drawings based on given interpretations.
- 4) Compare and contrast basic surveying instruments and their principles for simple measurements.
- 5) Assess the importance of water resources management in relation to environmental and societal needs.
- 6) Understanding the basic of the transportation system considering various factors.

**Prerequisite:** Knowledge of physics and mathematics up to 12 science level.

## **DETAILED SYLLABUS:**

| Sr.<br>No. | Module                                   | Detailed Content  | Hours | LO<br>Mapping |

#### **Rationale:**

An introductory course of the branch is necessary in first year to give an overall view and develop interest.

## **Course Objectives:**

- 1 To understand the anatomical structures and physiological processes of the human body.
- 2 To understand bio-electric signals and their recording.
- 3 To understand need for patient monitoring and continuous recording of vitals.
- 4 To understand need for life saving equipment's and get acquainted with their construction and working.
- 5 To understand basics of imaging equipment.
- 6 To understand basic concepts and theory related to statistics.

#### **Course Outcomes:**

- 1. Learners will be able to explain the anatomical parts and physiological processes of important systems of human body.
- 2. Learners will be able to record bio-electric signal from the human body.
- 3. Learners will be able to acquire human vitals from patient in ICU.
- **4.** Learners will be able to demonstrate working of the lifesaving instruments.
- 5. Learners will be able to explain construction and working of X-ray and Ultrasound.
- **6.** The learner will be able to perform preliminary analysis of the medical data.

**Prerequisite:** Knowledge of living organisms, Basics of electrical and electronics circuits, Physics of sensors and measurements.

#### **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of Module                 | Detailed Content  | Hours | CO<br>Mapping |
|------------|--------------------------------|---|-------|---------------|
| 110.       |                                |   |       | Mapping       |
| 0          | Prerequisite                   | Knowledge of living organisms, Basics of electrical and electronics circuits, Physics of sensors and measurements | 0     |               |
| I          | Introduction to the Human Body | Cardiovascular system, Respiratory system,<br>Nervous system, Special senses, Action<br>potential                 | 05    | CO1           |

#### Assessment:

## Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

## **End Semester Theory Examination:**

- > Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of **four questions** need to be answered

## **Lab Objectives:**

- 1 To understand test and measuring instruments.
- 2 To understand bio-electric signals and their recording.
- 3 To understand need for patient monitoring and continuous recording of vitals.
- 4 To understand need for life saving equipment's and get acquainted with their construction and working.
- 5 To understand basics of imaging equipment's.
- 6 To understand basic concepts and theory related to statistics

## **Lab Outcomes:**

- 1 Learner will be able to make measurements using common tools.
- 2 Learners will be able to record bio-electric signal from the human body.
  - 3 Learners will be able to acquire human vitals from patient in ICU.
- 4 Learners will be able to demonstrate working of the lifesaving instruments.
- 5 Learners will be able to explain construction and working of X-ray and Ultrasound.
- 6 The learner will be able to perform preliminary analysis of the medical data.

**Prerequisite:** Knowledge of living organisms, Basics of electrical and electronics circuits, Physics of sensors and measurements.

| 12    | Analysis of variance   | 2 |  |  |  |  |  |

## **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

#### **Assessment:**

#### Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

## **End Semester Theory Examination:**

Question paper format

- Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered

#### **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

#### Rationale:

The course focuses on imparting a understanding of unit operations, unit processes, and key concepts like pH, solubility, specific gravity, and electrical conductivity essential for handling solutions and mixtures. Emphasis is placed on mastering these fundamentals to enhance operational efficiency and quality. Additionally, the course prioritizes safety awareness to prevent accidents and ensure workplace safety, equipping to mitigate risks in chemical processing environments.

## **Course Objectives:**

- 1. To study chemical engineering principles, and essential chemical calculation.
- 2. To study fundamental principles and applications of various unit operations
- **3.** To study chemical reactions and applications of essential unit processes.
- **4.** To study chemical processes and interpretation of flow sheets and block diagrams
- **5.** To study fundamental principles and techniques in chemical processes.
- **6.** To study the various utilities in a Chemical plant.

#### **Course Outcomes:**

Gain knowledge of chemical engineering principles, industry applications, and essential chemical calculation.

- 1) Understand the fundamental principles and applications of various unit operations in chemical engineering, including mechanical, mass, and heat transfer processes.
- 2) Understand the key chemical reactions and applications of essential unit processes used in industrial chemical production.
- 3) To analyze chemical processes, understand key performance metrics, and interpret flow sheets and block diagrams
- 4) Understand fundamental principles and techniques for measuring parameters along with the importance and use of Personal Protective Equipment (PPE) in chemical processes.
- 5) Understand the use and management of utilities in a Chemical plant

#### **Prerequisite:**

HSC standard Physics, Chemistry and Maths DETAILED SYLLABUS:

| Sr.<br>No. | Name of Module                                | Detailed Content  | Hours | CO<br>Mapping |
|------------|---|---|-------|---------------|
| 0          | Prerequisite                                  |   |       |               |
| I          | INTRODUCTION                                  | Historical background, scope of chemical engineering, types of industries - nature and size of industries (large, medium, small scale). Units, dimensions, conversions and conversion factors.  Basic concepts and basic chemical calculations: Concept of mole, weight percentage, mole percentage, normality, molarity, molality, vapour pressure, partial pressure. Dalton's law, Amagat's law                       | 04    | CO1           |
| II         | UNIT<br>OPERATIONS                            | Definitions, purpose and principles of unit operations like Mechanical operation: Size reduction, Size separation, Filtration, Sedimentation, Mixing.  Mass transfer: Gas absorption, Desorption. Mass and Heat transfer: Distillation, Drying.  • Heat transfer: Modes of heat transfer.  • Fluid flow: Fluid handling.  | 04    | CO2           |
| III        | UNIT<br>PROCESSES                             | Unit processes with simple examples like Sulphonation, Oxidation, Reduction, Hydrogenation, Hydration, Saponification, Esterification, Nitration, Chlorination and Cracking/Pyrolysis   | 04    | СО3           |
| IV         | BASIC<br>CONCEPTS OF<br>CHEMICAL<br>PROCESSES | Chemical Process, Definition of conversion, yield, reaction efficiency. Introduction to Process Flow sheets: block diagrams   | 04    | CO4           |
| V          | PROCESS<br>INSTRUMENTAT<br>ION AND<br>SAFETY  | Temperature scales, measurement of temperatures using mercury thermometer. Pressure scales, units, measurement of pressure using manometers.  Level measurement using direct methods like bob and tape, float and tape, sight glass.  • Flow measurement using rotameter.  • Measurement of viscosity by using Redwood viscometer and density by using specific gravity bottle.  • Personal Protective Equipment (PPE). | 05    | CO5           |

| VI | PLANT     | List and use of various utilities in  | 05 | CO6 |
|----|-----------|---------------------------------------|----|-----|
|    | UTILITIES | chemical plant,                       |    |     |
|    |           | Use of Water, Steam, Air & Inert      |    |     |
|    |           | Gases as utilities                    |    |     |
|    |           | Steam Generator : Classification ,    |    |     |
|    |           | comparison , components.              |    |     |
|    |           | Construction and working of           |    |     |
|    |           | (a) Locomotive Fire tube boiler       |    |     |
|    |           | (b) Lancashire boiler                 |    |     |

## Lab Objectives:

- 1. To enable the students to understand the development of a process from its chemistry
- 2. Apply principles of basic sciences and chemical engineering for designing various size reduction and separation equipment
- 3. Learn reactant properties influence reaction pathways and product formation.
- **4.** To demonstrate the application of chemical process principles through the analysis of reaction
- **5.** To understand the primary mechanisms of sensors
- **6.** To understand construction and working principles boilers.

#### **Lab Outcomes:**

- 1. Outline laboratory procedures for the preparation of industrially important chemicals and products
- 2. Acquire analytical skills for determination of particle size of solid mixture
- 3. Understand reactant properties to reaction Mechanism and product formation.
- 4. Analyze and optimize chemical reactions by calculating and interpreting conversion, yield, and reaction efficiency metrics.
- **5** The student will be able to calculate the output of various measuring schemes
- **6.** To explore the role of utilities, study boilers and cooling towers, and conduct data collection and analysis for understanding industrial process efficiency and optimization.

## **Prerequisite:**

#### **DETAILED SYLLABUS:**

| Sr.<br>No. | Module  | Detailed Content  | Hours                    | LO<br>Mapping |

| 16    | Study of Cooling tower   | 2   |

#### **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

# Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

## **Course Objectives:**

- 1 To provide students with a foundational understanding of wireless communication systems.
- 2 To understand the basic principles of fiber optic communication.
- 3 To learn computer network fundamentals
- 4 To understand the basics of analog
- 5. To digital communication system
- 6 To provide students with a foundational understanding of satellite

#### Course Outcomes: -Students will be able to:-

- CO1: Understand basics of analog communication system
- CO2: Explain basics of digital communication system
- CO3: Learn the fundamental key concepts of computer networks
- CO4: Know the various elements of mobile communication systems.
- CO5: Understand the fundamentals of Fiber Optical Communication System.
- CO6: Describe the fundamentals of the satellite communication system.

#### **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of Module                       | Detailed Content   | Hours | CO<br>Mapping |
|------------|--------------------------------------|--|-------|---------------|
| 0          | Prerequisite                         |  |       |               |
| 1          | Analog<br>Communication              | Introduction to Communication<br>Systems, Analog & Digital Signal,<br>Need for Modulation and<br>Demodulation. Amplitude and<br>Frequency Modulation and<br>Demodulation.      | 4     | CO1           |
| 2          | Digital<br>Communication             | Introduction to Digital<br>Communication, Definition of<br>sampling theorem, Pulse Code<br>Modulation, Basics of ASK, FSK &<br>PSK waveforms.                                  | 4     | CO2           |

#### **Assessment:**

## Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

## **End Semester Theory Examination:**

- > Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of **four questions** need to be answered

#### Lab Objectives: -

- 1. To demonstrate generation and detection of analog modulation techniques.
- 2. To demonstrate generation and detection of digital modulation techniques.
- 3. To illustrate the different computer network topology.
- 4. To illustrate the mobile various AT commands of GSM & to know about parameters of Wi-Fi.
- 5. To make use of modern tools for simulation of communication systems.
- 6. To provide practical experience in simulating satellite communication.

## Lab Outcomes: Students will be able to

LO1: Demonstrate the concepts of AM and FM

LO2: Compare digital modulation techniques PCM, ASK, FSK

LO3: Simulate a computer network using various network components

LO4: Use of AT Commands in mobile device

LO5: Setting up of optical fiber link

LO6: Simulate satellite communication scenarios.

#### **DETAILED SYLLABUS:**

| 12    | Simulation of Satellite Communication System.  | 2   |
| 13    | Setting up/ Simulate Analog fiber optic communication System using open source software  | 2   |
| 14    | Setting up/ Simulate Digital fiber optic communication System using open source software | 2   |

## **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

## **Course Objectives:**

- 1. To list & describe the different methods of Power generation
- 2. To elaborate the various types of transmission lines
- 3. To discuss the various types of electrical loads
- 4. To understand and calculate the power consumption in electrical system
- 5. To explain the various types of electrical energy storage system
- 6. To discuss the various types of electrical meters

## **Course Outcomes:**

- 1. Understand the different methods of Power generation
- 2. Evaluate the sending end and receiving end voltage of transmission line
- 3. Study the various types of electrical loads
- 4. Understand the ratings and calculate the electrical energy consumption
- 5. Study the various types of electrical storage
- 6. Illustrate the working of different types of meters in electrical system

## **DETAILED SYLLABUS:**

| Sr. | Name of Module                    | Detailed Content  | Hours | CO     |
|-----|-----------------------------------|---|-------|--------|
| No. |                                   |   |       | Mappin |
|     |                                   |   |       | g      |
| I   | Generation of<br>Electrical Power | Overview of different methods of Power generation: thermal (fossil fuels, nuclear), renewable (solar, wind, hydro, geothermal), nuclear and emerging technologies (tidal, wave, biomass). | 06    | CO1    |
|     |                                   | Layout of hydroelectric power station, thermal power plant, solar generation, nuclear power plant   |       |        |

|     |  | with their advantages and disadvantages. Cost of generation, peak load and base load plant.   |    |     |
|-----|--|---|----|-----|
| II  | Transmission                                   | Short, medium and long transmission lines, Types of conductors used, Single phase transmission line, 3 phase transmission line (single circuit and double circuit).  Application of KVL, KCL to find sending end and receiving end voltage. Calculations of Power transmitted   | 04 | CO2 |
| III | Utilization of<br>Electrical Energy            | Electric Power Distribution: Generation, Transmission and distribution systems: grid structure, voltage levels.  Types of loads: Residential: lighting load, refrigeration and air conditioning, washing machine. Agricultural load: pumps. Industrial load: Electrical Drives- AC-DC, furnace, Electric heating & welding, Machines (Motors and generators: AC vs. DC) | 07 | CO3 |
| IV  | Ratings & Calculation of Energy Consumption    | Power rating of household appliances such as tube light, fan, air conditioners, PCs, laptops, printers, etc.  Definition of "unit" used for consumption of electrical energy, understand the calculation of electricity bill for LT & HT consumers.   | 03 | CO4 |
| V   | Energy Storage                                 | Battery Technologies: Chemistry basics: lead-acid, lithium-ion, sodium-ion, solid-state batteries. Charging and discharging characteristics. Battery management systems (BMS). Battery storage: types (lead-acid, lithium-ion, flow batteries), applications.   | 03 | CO5 |
| VI  | Measurement in<br>Electrical Energy<br>Systems | Importance of measurement in electrical energy systems. Basic principles of electrical measurements: instruments and techniques.  Moving coil and Moving iron Ammeters & Voltmeters, Power measurement by wattmeter in single phase circuit   | 03 | CO6 |

## Lab Objectives:

- 1. Evaluate the performance of transmission lines.
- **2.** Understand the performance parameters of a generator.
- **3.** Evaluate the characteristics of batteries.
- 4 Study the operation and performance of an electric motor.
- 5 Analyze the performance of renewable energy sources.
- **6.**Familiarize with electrical measurement techniques.

#### **Lab Outcomes:**

- 1) To study various aspects of performance of different renewable energy sources.
- 2) To analyze the operational behavior of batteries and energy storage.
- 3) To evaluate the efficiency and performance of DC machines (motor and generator) under varying speed and load conditions.
- 4) To demonstrate the effective use of various meters to perform voltage, current and power measurements of single and three phase circuits.
- 5) To study the nature of V-I characteristics for single phase and three phase loads.
- 6) To analyze the behavior of a transmission line under varying load conditions

## List of Experiments.

| Sr No | List of Experiments   |
|-------|---|
| 01    | Measure and plot the no load magnetization (open circuit) characteristic (V-I curve) of a DC generator.   |
| 02    | Calculate efficiency and voltage regulation of DC generator using external characteristics.   |
| 03    | Case study to get the current-voltage (I-V) characteristics of a solar PV panel under different light intensities (simulated using lamps).                          |
| 04    | Calculate the MPPT of a solar PV panel under different light intensities (simulation using lamps).  |
| 05    | Measure speed-torque characteristics of a DC motor under different load conditions.   |
| 06    | Calculate efficiency and analyze the starting and running performance of a DC motor under different load conditions.  |
| 07    | Measure charge-discharge characteristics of different types of batteries (e.g., leadacid, lithium-ion).   |
| 08    | To analyze efficiency, capacity, and voltage profiles of different types of batteries (e.g., lead-acid, lithium-ion) (simulation based or hands on).                |
| 09    | Perform voltage, current and power measurements in single phase circuit using analog meters and verify Ohm's law.   |
| 10    | Perform voltage, current and power measurements in single phase circuit using digital meters and verify Ohm's law.  |
| 11    | Perform voltage, current and power measurements in three phase circuit using analog meters and verify Ohm's law.  |
| 12    | Perform voltage, current and power measurements in three phase circuit using digital meters and verify Ohm's law.   |
| 13    | To perform load test using 1- phase and 3 phase sources and loads using MATLAB Simulink   |
| 14    | To deduce the transmission line performance i.e. sending end voltage and receiving end voltage for long, medium and short transmission lines using MATLAB Simulink. |
| 15    | Generation of sinusoidal voltage waveform using MATLAB Simulink.  |
| 16    | Simulation of transmission line model using MATLAB Simulink   |
| 17    | To perform speed control of DC motor using MATLAB Simulink  |
| 18    | To perform practical using breadboard to extract the charging and discharging characteristics of capacitor.   |
| 19    | Case Study to compare efficiency and reliability of different renewable energy sources  |
| 20    | Case Study to analyze the effectiveness of energy storage in balancing supply and demand in distribution networks.  |

## **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

## **Course Objectives:**

- 1. To familiarize with various Mechanical Engineering domains.
- 2. To provide insights on fundamental concepts in mechanical engineering.
- 3. To familiarize with latest technological developments in Mobility and Manufacturing domains.

#### Outcomes: Learner will be able to...

- 1. Understand the role of mechanical engineering in industry, society and concept of thermodynamics.
- 2. Illustrate working of gas power cycles and components used in I.C.Engines.
- 3. Compare and evaluate various types of coupling, clutches, brakes and belt and gear drives.
- 4. Comprehend various types of Refrigerants and concept of Air conditioning along with modern manufacturing processes
- 5. Identify and describe various advancements in Mobility domain.
- 6. Compare and classify various Engineering Materials and their properties.

| Module | Details   |    |  |  |  |  |
|--------|---|----|--|--|--|--|
| 1.     | Introduction to Mechanical Engineering Domain:  Role of Mechanical Engineering in Industry and Society, Application of Mechanical Engineering in various domains such as Automobile, Aerospace, | 04 |  |  |  |  |

|    | Energy, Manufacturing etc  Fundamentals of Mechanical Engineering: Concept of Prime Mover, Sources of Energy, Force and Mass, Pressure, Work, Power, Energy, Temperature, Heat.  Basic Concept of Thermodynamics: Definition, Microscopic and Macroscopic approach, System, Boundary and Surrounding, Thermodynamic properties Zeroth Law of Thermodynamics First law of thermodynamics, Internal Energy, Concept of Enthalpy and Entropy                      |    |
|----|--|----|
| 2. | Gas Power Cycles:  Definition of Cycle, Air standard efficiency, Carnot cycle, Otto cycle, Diesel cycle, Dual combustion cycle, Atkinson cycle, and Brayton cycle(Gas turbine cycle)  Internal Combustion Engines: Heat Engine, Classification of IC Engine, Components of IC Engine, Terms associated with IC Engine, Indicator diagram, Two stroke cycle engine, Four stroke cycle engine, Comparison between S.I and C.I engine.                            | 06 |
| 3. | Couplings, Clutches and Brakes Types of Coupling-Rigid and flexible Types of clutch-Friction and positive contact clutches Classification of brakes and mechanical brakes Mechanical Power transmission: Belt drives-Components of belt drive and types of velocity ratio, Types of belt drives (Flat belt, V-belt etc) and its applications, Concept of rope and chain drives. Gear Drives-Types of gears and velocity ratio, Simple and Compound gear trains | 05 |
| 4. | Refrigeration and Air conditioning: Application of refrigeration, Principle of refrigeration, Refrigeration system and Refrigerants. Air conditioning: Temperature, Humidity of air, Purity of air, Air circulation, Noise level Introduction to Modern manufacturing tools and techniques Components of CNC, Advantages of CNC, CNC machining centers and turning centers, Concept of Smart Manufacturing and Industrial IOT.                                 | 05 |
| 5. | Insights into future of mobility: Hybrid Electric Vehicle-Components, Series and parallel hybrids Electric Vehicle- PHEV, EREV, BEV and drives based on Battery and Motor locations Autonomous vehicles- SAE Taxonomy of Autonomous vehicles   | 04 |
| 6. | Engineering Materials: Classification of materials- Biomaterials, Advanced materials, Smarts Materials, Nanotechnology and Nanomaterials. Mechanical Properties of Metals, Ferrous Metals and Alloys, Non ferrous metals and alloys, Polymers and plastics, Ceramic materials and Composite materials  | 06 |

<sup>#-</sup> Laboratory component of two hours

## **TEXT/REFERENCE BOOKS:-**

- 1. Elements of Mechanical Engineering, V.K. Manglik
- 2. Elements of Mechanical Engineering, R.K.Rajput
- 3. Basic and Applied Thermodynamics, P.K.Nag, Tata McGraw Hill 2nd Ed., 2002
- 4. Internal Combustion Engine, V Ganesan, TMH

5. Electric Vehicle Technology Explained, James Larminie, John Lowry, Wiley

## List of Experiments: (Minimum 6 experiments to be submitted as a part of Teamwork)

- 1. Study Visit to any Industry in either Automobile/Aerospace/Energy/Manufacturing engineering unit.
- 2. Dismantling and Assembly of S.I or C.I Engine.
- 3. Demonstration of any machine consisting gear train.
- 4. Demonstration of working of Coupling, clutch and brakes.
- 5. Demonstrate Components and Working principles of Domestic Refrigerator.
- 6. Study/visit any commercial centralized Air-Conditioning unit, understand various components and operations, and prepare a comprehensive report.
- 7. Study/Visit an Industry using CNC/ modern techniques and submit a report.
- 8. Demonstrate working of CNC machine with an appropriate application.
- 9. Prepare a case study/Report on any working HEV/EV/FCEV.
- 10. Prepare a case study on various materials used/selected for any industrial application (Gears /A.C. Unit/Solar panel/Automobile/Rocket/Airplane etc.) and its importance.

#### Assessment:

## Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

- Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
  - Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
  - A total of four questions need to be answered

# Lab Objectives:

- 1. To study the basic concepts of Mechanical Engineering
- 2. To study operation of various mechanical components
- 3. To understand how a mechanical industry operates.
- 4. To introduce the concept of various boilers and steam generators
- 5. To understand the concept of mechanical power transmission
- 6. To corelate theory with practical working in industry

#### Lab Outcomes:

- 1. Recall the fundamental role of mechanical engineering and lists its application areas.
- 2. Explain various ways in which energy is generated.
- 3. Compare different types of steam generators and boilers.
- 4. Understand basic working principles of different prime movers
- 5. Describe various tools used for Engine service.
- 6. Identify and describe various types of robots and its end effectors.

**Prerequisite:** Knowledge of physics and mathematics up to 12 science level.

| 12 | Study experiment on types of boilers                          | 02 |  |  |

| Sr No | List of Assignments / Tutorials  | Hrs |
|-------|--|-----|
| 01    | Compare Renewable and Nonrenewable energy resources  | 1   |
| 02    | Show the enthalpy of steam is equal to total heat supplied in its generation.  | 1   |
| 03    | Will the pressure indicated by pressure gauge be greater or less than atmospheric pressure? If so why? How the gauge pressure to be corrected to obtain the absolute pressure.                 | 1   |
| 04    | Why are safety valves required in boilers?   | 1   |
| 05    | What are biofuels? Explain briefly common types of biofuels.   | 1   |
| 06    | Draw temperature-enthalpy diagram for constant pressure heating process to represent on it the following:  Sensible heat region  Latent heat region  Superheated region  Dryness fraction 0.75 | 1   |
| 07    | Define following terms with help of simple diagram  a) Manipulator  b) Joint  c) Link  d) Degree of freedom  e) End effector  f) Base  | 1   |
| 08    | State the application of composite materials in Automobile and aircraft.   | 1   |

#### **Assessment:**

**Term Work:** Term Work shall consist of at least 8 to 10 practical's based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical& Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

# **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 50 Marks (Total marks) = 25 Marks (Capstone Project) + 15 Marks

(Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

# Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus

# Course Objectives: The course aims to

- 1. Learn the list different types of sensor/measuring instruments used for displacement, velocity, acceleration, force and torque.
- 2. Define and describe working principles and characteristics of the sensors and Measuring Instruments.
- 3. Implement and sketch the electronic signal processing for the sensors
- 4. Select and defend suitable sensor/measuring system for a specific application

# **Course Outcomes:**

At the end of the course, students will demonstrate the ability to

- 1. List different types of sensor/measuring instruments used for displacement, velocity, acceleration, force and torque.
- 2. Define and describe working principles and characteristics of the sensors and Measuring Instruments.
- 3. Implement and sketch the electronic signal processing for the sensors
- 4. Select and defend suitable sensor/measuring system for a specific application

# **Prerequisite:**

# **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of Module Detailed Content |   | Hours | CO<br>Mapping |
|------------|---------------------------------|---|-------|---------------|
| 0          | Prerequisite                    |   |       |               |
| Ι          |                                 | Introduction of measuring Systems:Concepts and terminology of measurement system, transducer, sensor, range and span, classification of transducers, static and dynamic characteristics, selection criteria, sources of errors and their statistical analysis, standards and calibration. Introduction to Mesh analysis, nodal analysis and One port and two port networks  | 7     | CO1           |
| II         |                                 | Resistance, Inductance & Capacitance Measurement: Wheatstone bridge, design, arrangement of ratio arms, sensitivity, errors, null type and deflection type, calibration adjustment, Kelvin bridge, Kelvin double bridge, series ohmmeter, shunt ohmmeter, DMM. Maxwell's bridge: design and applications, Schering bridge: design and applications, LCR Q-meter   | 7     | CO2           |
| III        |                                 | Displacement Measurement:Resistive: Potentiometer, Linear and rotary, Loading Effect types of strain gauges. Inductive: LVDT and Eddy current type Transducers. Capacitive:Capacitance pickups, Differential capacitive cells. Piezoelectric, Ultrasonic transducers and Hall effect transducers Optical transducers. Precision measuring instrument (gauges), Angular measurement: Combination protractor, universal bevel protractor, sine bar, clinometers, optical prism method | 7     | CO 3          |
| IV         |                                 | Velocity and Acceleration measurement:Standards, working principle, types,  | 7     | CO 4          |

|    | materials, design criterion: Moving magnet and moving coil, Electromagnetic tachometer, Photoelectric tachometer, Toothed rotor variable reluctance tachometer. Magnetic pickups,Encoders, Photoelectric pickups, stroboscopes and stroboscopic method, Shaft speed measurement.  Standards, working principle, types, materials, design criterion: Eddy current type, piezoelectric type, Seismic Transducer, Accelerometer: Potentiometric type, LVDT type, |              |
|----|---|--------------|
| V  | Piezo-electric type  Force and torque measurement:Basic methods of force measurement, elastic force traducers, strain gauge, load cells, shear web, piezoelectric force transducers, vibrating wire force transducers, Strain gauge torque meter, Inductive torque meter, Magneto-strictive transducers, torsion bar dynamometer, etc. Dynamometer (servo control and absorption) instantaneous power measurement   | CO 5<br>CO 6 |
| VI |   |              |

#### **Assessment:**

#### Internal Assessment (IA) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

- > Question paper format
  - Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus

- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered

# **List of Experiments:**

- 1. Determination of admittance and impedance of one port network.
- 2. Design and implementation of resistance measurement such as Wheatstone bridge, LCR meter, V-I Method.
- 3. Design, implementation of series and shunt ohmmeters. Evaluate its performance characteristics.
- 4. Characterization and calibration of potentiometer as displacement sensor. Study of loading effect on potentiometer (linear and rotary).
- 5. Characterization and calibration of LVDT based displacement measurement system.
- 6. Characterization of strain gauge using cantilever beam.

- 7. Characterization and calibration of piezoelectric measurement system.
- 8. Measurement using proximity sensors (inductive/Capacitive) for an application

#### **Assessment:**

**Term Work:** Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

**Term Work Marks:** 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

**Rationale:** This group of activities is to support Individual Interest, Skill utilization and desire to contribute towards social welfare and discharge a duty of good citizen. Activities offered are based on based on diverse scope, ranging from social activities and services, training as a volunteer at the time of National Emergencies, Training volunteer take part at National level campaign in the field of science and technology.

# **Course Objectives:**

- Understanding knowledge from a range of disciplines
- Connecting knowledge to other knowledge, ideas, and experiences
- Constructing knowledge
- Relating knowledge to daily life
- Critical thinking
- Reflective thinking
- Effective reasoning
- Creativity

#### **Course Outcomes:**

- 1) Communicate effectively verbally and in writing by selecting proper content, tone, and demeanor for the situation
- 2) Demonstration effective use of technology for personal and professional activities, including electronic communication and information resources
- 3) Develop and actively pursue personal, academic and professional goals
- 4) Seek guidance and assistance as needed to achieve academic success, maintain good academic standing and progress toward a degree
- 5) Manage personal affairs by demonstrating empathy toward others, caring for one's self and seeking assistance as needed
- 6) Demonstrate professionalism toward peers, faculty, staff, employers and other members of the College community through social etiquette, effective communication and restraint

# **DETAILED GUIDELINE:**

# 1 ) For NSS /NCC

The students shall earn marks for all relevant activities, which include Sports and Games, NCC, NSS etc. Every student opted for NSS is expected

to participate in the program for a minimum of 120 hours in a semester to become eligible for the credit. Every time the student participates / completes a task, the same is entered in the attendance register meant for the purpose and to be certified by the concerned Head and the Academic Coordinator, at the end of the semester, the student shall be awarded marks for participation as devised for the respective program.

# <u>Assessment:</u> (<u>Towards termwork</u>) <u>Evaluation Pattern for Participation</u>

| Sr No | Particulars                             | Max marks |
|-------|---|-----------|

#### 2) For Civil Defense

Civil Defence offers members the opportunity to train in a variety of skills and to learn new techniques that will not only assist your local community in the event of an emergency but will also enhance your own personal development. All training is given by experienced instructors and is certified to national standards. Casualty Service – training for First Aid, Rescue Service – training for Rescue. Fire Fighting Service – training in certain areas of fire fighting. Pumping floodwaters and supplying water and emergency services for support to the community.

The activity can be started at college level/ Cluster level by coordinating with the local Civil defense center. Training will be arranged by the Local civil defense center set up by the Directorate of civil defense, Maharashtra state in the region of College/ Cluster. a Civil Defense unit can be established by a Coordinator assigned amongst the desiring faculty member at college / cluster level.

# **OBJECTIVES OF CIVIL DEFENCE UNIT**

To enable students to identify social issues and their solutions.

To develop self discipline and a helping attitude among the students.

To make students responsible citizens For protection of the environment.

To implement government programs and policies among people.

To prepare students to give scientific aid in natural and manmade disaster

# 3) For Amateur Radio

Amateur Radio is a scientific activity popularly known as "Ham Radio". Amateur radio operators use two way radio stations and communicate with others similarly authorized using various modes of communication like voice, morse code, computers, internet etc. The things that amateur radio operators do with their radios are as diverse as the people themselves. The advanced amateur radio communication techniques include Automatic Position Reporting Systems using GPS information, Internet linking of Repeater stations, Interface with internet for exchange of emails, images etc as well as visual communication modes.

Amateur (HAM) Radio is both a Hobby activity and Service. It is an activity of self learning, intercommunication & technical investigation carried on the duly authorized persons (i.e. Amateur Radio Operators) for a personal aim and without pecuniary interest. A wireless communication network through Amateur Radio is one of the most effective and alternate medium of communication and can play a significant role in providing reliable communications when other normal communications fail. The skills of the trained amateur radio operator can be used for public service in times of need and national emergencies. For participation in ISRO programs for student satellites and to act as a volunteer for radio monitoring of space missions, owning an Amateur (HAM) Radio operators certification is a legal and technical essential condition .

The Activity can be started at college level or at University inducted Nodal Centers. Interested faculties can be assigned a role of coordinator and enroll students for becoming Radio enthusiasts.

#### Rationale:

The Indian Knowledge System (IKS) is vital for preserving India's rich cultural heritage, fostering holistic and sustainable practices, and integrating ancient wisdom with modern science to address contemporary challenges and enrich global knowledge.

# **Course Objectives:**

- 1. To explore and understand the evolution of Indian scientific thought
- 2. To evaluate the historical and modern educational systems in our country
- 3. To analyse sustainable practices in in ancient India
- 4. To know the richness of Indian Arts and Culture
- 5. To understand the contributions of Indian Scientists and Nobel Laureates
- 6. To understand the principles of good governance

#### **Course Outcomes:**

- 1. Recognize the sources and concepts of the Indian knowledge system
- 2. Learn about our history of Indian ancient knowledge and its significance in the current scenario.
- 3. Demonstrate sustainable development in various fields like Science, Technology, agriculture, industry, architecture performing arts, etc.
- 4. Understand and appreciate the rich heritage that resides in literature
- 5. Learn about the ancient Bhartiya education system in comparison with the modern era
- 6. Showcase the multi-dimensional nature of IKS and its importance in modern society

# **Prerequisite:**

- 1. Students should have the foundational knowledge and skills necessary for a comprehensive understanding of IKS
- 2. Students should be familiar with the Indian Culture, Language, and History of Science and Technology in India.

# **DETAILED SYLLABUS:**

#### **Assessment:**

# Suggested Pedagogy and assessment criteria for Teachers:

- 1. Project-based activities.
- 2. Presentation, Group Discussions, and Case studies.
- 3. Visit historical places.
- 4. Flip class mode/ Roleplay
- 5. Quiz MCQ
- 6. Assignment as per the modules: 06
- 7. Internal Assessment through flipped class and PowerPoint presentation along with documentation

# **Objectives:**

# To provide practice in ....

- 1. Understanding Traditional Indian Knowledge Systems that have evolved in India over centuries
- 2. Learn practical applications of traditional Indian techniques in various fields
- 3. Promote the cultural heritage in Indian knowledge systems,
- 4. Develop skills to critically analyze Indian knowledge systems in contemporary contexts, assessing their relevance, strengths, and limitations.
- 5. Analyze interdisciplinary connections between Indian knowledge systems and modern scientific & technological advancements.
- 6. Apply communication & collaborative abilities through group discussions or presentations focusing on specific aspects of Indian knowledge systems.

#### **Outcomes:**

#### Learners will be able to

- 1. Learn about the evolution and practices of major Indian religions
- 2. Gain insight into the cultural diversity of India through its art, literature, music, dance, and architecture.
- 3. Recognize India's historical contributions to fields such as mathematics astronomy, medicine, and technology.
- 4. Develop critical ability to evaluate different interpretations of Indian knowledge systems in academics, literature, media, and popular culture.
- 5. Analyze how Indian philosophical and spiritual ideas have influenced global thought
- 6. Understand the relevance of Indian knowledge systems in contemporary contexts, including their role in shaping social values, ethics, and sustainable practices.

| Sr<br>No | Details of Activities  | Hrs |
|----------|--|-----|
| 01       | Project-based activities   | 02  |
| 02       | Presentation   | 02  |
| 03       | Case studies   | 02  |
| 04       | Visit historical places and write a report   | 02  |
| 05       | Flip class mode  | 02  |
| 06       | Quiz with MCQ  | 02  |
| 07       | Comparative Study of IKS & other philosophical & scientific systems around the world | 02  |
| 08       | Group Discussions  | 02  |
| 09       | Roleplay   | 02  |
| 10       | Self-study activities  | 02  |

(The faculty can choose any of these activities for continuous assessment)

#### **Assessment:**

# Suggested Pedagogy and assessment criteria for Teachers:

- 1. Total Assignments as per the modules: 06
- 2. Internal Assessment through flipped class and PowerPoint Presentation along with documentation
- Sample Case Studies:
- Mathematics of Madhava, Nilakantha Somayaji
- Astronomical models of Aryabhata
- Wootz steel, Aranumula Mirrors, and lost wax process for bronze castings
- Foundational aspects of Ayurveda
- Foundational aspects of Ashtanga yoga
- Foundational aspects of Sangeeta and Natya-shastra

#### Term Work:

Assignments: 10 Marks

• Presentation/Group Discussion:10 Marks

• Attendance: 05 Marks

# **Lab Objectives**

- 1. To impart training to help the students develop engineering skill sets.
- 2. To inculcate respect for physical work and hard labor.
- 3. To get exposure to interdisciplinary engineering domain.

# Lab Outcomes: Learner will be able to...

- 1. Develop the necessary skill required to handle/use different carpentry tools.
- 2. Identify and understand the safe practices to adopt in electrical environment.
- 3. Demonstrate the wiring practices for the connection of simple electrical load/ equipment.
- 4. Design, fabricate and assemble pcb.
- 5. Develop the necessary skill required to handle/use different masons tools.
- 6. Develop the necessary skill required to use different sheet metal and brazing tools.

7. Able to demonstrate the operation, forging with the help of a simple job.

# **DETAILED SYLLABUS**

|  | <b>Detailed Content</b> | Hrs. |
|--|-------------------------|------|
|--|-------------------------|------|

#### Note:

Trade 1 and 2 are compulsory. Select any ONE trade topics out of the topic trade 3 to 5. Demonstrations and hands on experience to be provided during the periods allotted for the same. Report on the demonstration including suitable sketches is also to be included in the term work

CO-1 is related to Trade-1

CO-2 to CO-4 is related to Trade-2

CO-5 is related to Trade-3

CO-6 is related to Trade-4

CO-7 is related to Trade-5

CO evaluation is to be done according to the opted Trades in addition to Compulsory Trades.

# Trade-1 1. Use and setting of hand tools like hacksaws, jack planes, chisels and gauges for construction of various joints, wood tuning and modern wood turning methods. 2. Term work to include one carpentry job involving a joint and report on demonstration of a job involving wood turning

| Trade-  | <ol> <li>Basic Electrical work shop:(Compulsory):</li> <li>Single phase and three phase wiring. Familiarization. of protection switchgears and their ratings (fuse, MCB, ELCB). Wiring standards, Electrical safety in the work place safe work practices. Protective equipment, measures and tools.</li> <li>Layout drawing, layout transfer to PCB, etching and drilling and soldering technique</li> </ol> | U8 |
|---------|---|----|
| Trade-3 | <ul> <li>Masonry:</li> <li>5. Use of masons tools like trowels, hammer, spirit level, square, plumb line and pins etc. demonstration of mortar making, single and one and half brick masonry, English and Flemish bonds, block masonry, pointing and plastering.</li> </ul>   | 06 |

| Trade 4 | Sheet metal working and Brazing: 6. Use of sheet metal, working hand tools, cutting, bending, spot welding                            | 06 |
|---------|---|----|
| Trade-  | Forging (Smithy):  7. At least one forging job to be demonstrated and a simple job to be made for Term Work in a group of 4 students. | 06 |

#### **Text Books:**

- 1. Workshop Technology, Volume-I, P.N.Rao, McGrrawHill Publication
- 2. Elements of Workshop Technology, Vol-I, S.K. Hajra Choudhury, A K Hajra Choudhury, Nirjar Roy, Media Promoters & Publishers Pvt Ltd

# Lab Objectives:

- 1. To familiarize learners with Python's basic syntax, variables, data types, operators, and input/output functions.
- 2. To reinforce the understanding and application of conditional statements, loops, and functions in Python programming.
- 3. To instill learners on file handling, exception management, and Python packaging.
- 4. To Introduce object-oriented programming principles and their application in Python.
- 5. To explore advanced topics such as regular expressions, pattern matching, and GUI development.
- 6. To introduce and demonstrate the use of popular Python libraries for data handling.

#### Lab Outcomes: Learner will be able to

- 1. Demonstrate the proficiency in basic python programming or Create and perform various operations on data structures like list, tuple dictionaries and strings.
- 2. Apply Control Flow and Functions for efficient coding to solve problems.
- 3. Demonstrate proficiency in handling file operations, managing exceptions, and developing Python packages and executable files for modular programming.
- 4. Illustrate the concept of Object-Oriented Programming used in python.
- 5. Design Graphical User Interface (GUI) applications, utilizing appropriate Python libraries to create user-friendly interfaces.
- 6. Investigate and apply popular python libraries to conduct efficient data handling tasks.

**Prerequisite:** VSEC 102 C Programming

#### **DETAILED SYLLABUS:**

| Sr.<br>No. | Module                                  | Detailed Content  | Hrs | LO<br>Mapping |
|------------|---|---|-----|---------------|
| 0          | Prerequisite                            | Introduction to Programming: Understanding basic concepts like algorithms, flowcharts, and pseudocode.  Problem-Solving Skills: Ability to approach problems methodically and apply logical thinking to develop solutions.        | 1   |               |
| 1          | Introduction to Python                  | <ol> <li>Basic Syntax and Data Types - Variables and data types, Operators, Input and output,</li> <li>Data Structures- list, tuple, set and dictionary</li> <li>Understanding the Syntax Transition: From C to Python</li> </ol> | 4   | L1            |
| 2          | Control Flow and<br>Functions           | <ul> <li>2.1 Conditional Statements: if, else, elif</li> <li>2.2 Loops: for and while loop</li> <li>2.3 Functions- Defining functions, Parameters and return</li> <li>values, Scope and lifetime of variables</li> </ul>          | 4   | L2            |
| 3          | File Handling, Packaging, and Debugging | 3.1 File Handling- Reading and writing files, Exception handling  | 4   | L3            |

|   |                        | <ul><li>3.2 Creating Python Packages, Modules and executable files</li><li>3.3 Dealing with Syntax Errors, Runtime Errors and</li></ul> |   |     |
|---|------------------------|---|---|-----|
|   |                        | Scientific Debugging  |   | T / |
| 4 | <b>Object-Oriented</b> | 4.1 Introduction to OOP: Classes and objects,   | 4 | L4  |
|   | Programming (OOP) in   | Encapsulation,  |   |     |
|   | Python                 | inheritance, and polymorphism   |   |     |
|   |                        | 4.2 Creating Classes and Objects: Class attributes  |   |     |
|   |                        | and   |   |     |
|   |                        | methods Constructor and destructor.   |   |     |
|   |                        | 4.3 Type of Inheritance: Single, multiple and   |   |     |
|   |                        | multilevel  |   |     |
|   |                        | inheritance   |   |     |
| 5 | Advanced Python        | 5.1 Regular Expressions, Pattern matching,  | 5 | L5  |
|   | Concepts               | Regex functions   |   |     |
|   | •                      | in Python   |   |     |
|   |                        | 5.2 GUI Development using any Python GUI  |   |     |
|   |                        | framework   |   |     |
| 6 | Duth an Librarias      | 6.1 Introduction to Popular Libraries   | 4 | L6  |
|   | Python Libraries       | 6.2 NumPy for numerical computing,  |   |     |
|   |                        | 6.3 Pandas for data manipulation  |   |     |
|   |                        | 6.4 Matplotlib for data visualization   |   |     |

# List of Experiments.

The following experiments serve as samples to illustrate the application of concepts covered in each unit. Instructors are encouraged to modify and adapt these experiments to meet the specific needs of the course and the learning objectives. It is essential to ensure that the fundamental concepts and skills outlined in each unit are adequately covered, even with modifications.

| Week | List of Experiments | Hrs |
|------|---------------------|-----|
| No   |                     |     |

|    | <b>Objective:</b> To enable learners to transition their understanding of basic programming constructs from C to Python by focusing on Python's syntax, variables, data types, operators, and input/output functions, and comparing these elements with their equivalents in C  |    |
|----|---|----|
| 01 | <ol> <li>Personalized Greeting Generator* - Write a python code to generate Personalized Greeting.</li> <li>Calculating Areas of Geometric Figures* - Write a python program to calculate areas of any geometric figures like circle, rectangle and triangle.</li> <li>Developing Conversion Utilities: Develop any converter such as Rupees to dollar, temperature convertor, inch to feet etc.</li> <li>Calculating Gross Salary of an Employee*: Write a Python program to calculate the gross salary of an employee. The program should prompt the user for the basic salary (BS) and then compute the dearness allowance (DA) as 70% of BS, the travel allowance (TA) as 30% of BS, and the house rent allowance (HRA) as 10% of BS. Finally, it should calculate the gross salary as the sum of BS, DA, TA, and HRA and display the result.</li> <li>Calculating Simple Interest: Write a Python program to calculate the simple interest based on user input. The program should prompt the user to enter the principal amount, the rate of interest, and the time period in years. It should then compute the simple interest using the formula Simple Interest=(Principal×Rate×Time) /100 and display the result.</li> <li>Exploring Basic Arithmetic Operations in Python*: Write a Python program to explore basic arithmetic operations. The program should prompt the user to enter two numbers and then perform addition, subtraction, multiplication, division, and modulus operations on those numbers. The results of each operation should be displayed to the user.</li> </ol> | 02 |
| 02 | Objective: Mastering Python New Data Structures for Practical Applications  Task List Manager*: Develop a Python program to manage a task list using lists and tuples, including adding, removing, updating, and sorting tasks.  Student Enrollment Manager *: Create a Python code to demonstrate the use of sets and perform set operations (union, intersection, difference) to manage student enrollments in multiple courses / appearing for multiple entrance exams like CET, JEE, NEET etc.  Student Record Keeper *: Write a Python program to create, update, and manipulate a dictionary of student records, including their grades and attendance.   | 02 |
| 03 | <ol> <li>Objective: To enable students to transition their understanding of control statements and loops from C to Python, emphasizing the adoption of Python syntax while reinforcing logical structures already learned.</li> <li>Triangle Pattern Generator Using Loops: Write a Python program to print a triangle pattern (give any), emphasizing the transition from C to Python syntax.</li> <li>Number Type Identifier*: Develop a Python program that takes a numerical input and identifies whether it is even or odd, utilizing conditional statements and loops.</li> <li>Character Type Identifier: Create a Python program to check whether the given input is a digit, lowercase character, uppercase character, or a special character using an 'ifelse-if ladder.</li> <li>Multiplication Table Generator: Write a Python program to take a numerical input from the user and generate its multiplication table using loops.</li> <li>Fibonacci Sequence Generator: Develop a Python program to print the Fibonacci sequence using a while loop.</li> <li>Factorial Generator*: Design a Python program to compute the factorial of a given integer N.</li> </ol>  | 02 |

|     | 7. <b>Prime Number Analyzer*:</b> Using function, write a Python program to analyze the input   |    |
|-----|---|----|
|     | <ul> <li>number is prime or not.</li> <li>8. Simple Calculator Using Functions*: Implement a simple Python calculator that takes user input and performs basic arithmetic operations (addition, subtraction, multiplication,</li> </ul> |    |
|     | <ul> <li>division) using functions.</li> <li>9. Interactive Guessing Game: Develop a number guessing game where the program generates a random number, and the user has to guess it. Implement loops and conditional</li> </ul>         |    |
|     | statements for user interaction.  |    |
|     | <b>Objective:</b> To enable learners to proficiently handle file operations, manage exceptions, and create Python packages and executable files.  |    |
|     | 1. Extracting Words from Text File *: Develop a Python program that reads a text file and prints words of specified lengths (e.g., three, four, five, etc.) found within the file.  |    |
| 04  | 2. <b>Finding Closest Points in 3D Coordinates from CSV</b> : Write a python code to take a csv file as input with coordinates of points in three dimensions. Find out the two closest points.  | 02 |
|     | 3. Sorting City Names from File: Write a python code to take a file which contains city names on each line. Alphabetically sort the city names and write it in another file.  |    |
|     | 4. Building an Executable File*: Create a executable file for any program developed in earlier practical.   |    |
|     | <b>Objective:</b> To enable learners to proficiently handle errors and exceptions in Python programs, ensuring robust and fault-tolerant code. Learners will also develop debugging skills  |    |
|     | to identify, diagnose, and fix issues efficiently using scientific debugging methods.   |    |
|     | 1. <b>Basic Exception Handling*</b> : Write a Python program that takes two numbers as input  |    |
|     | and performs division. Implement exception handling to manage division by zero and invalid input errors gracefully.   |    |
|     | 2. <b>Custom Exceptions</b> : Develop a Python program that simulates a banking system with a   |    |
|     | function to withdraw money. Raise custom exceptions for scenarios such as insufficient  |    |
| 05  | funds and invalid account numbers   | 02 |
|     | 3. Logging for Debugging: Enhance a Python program by adding logging statements to  |    |
|     | record the flow of execution and error messages. Use the logging module to configure different logging levels (INFO, DEBUG, ERROR).   |    |
|     | 4. Using a Debugger*: Demonstrate the use of a Python debugger (e.g., pdb or an IDE   |    |
|     | with debugging capabilities) on a sample program with intentional errors. Guide students  |    |
|     | on setting breakpoints, stepping through code, and examining variable values.  5. Scientific Debugging Techniques: Provide a Python program with multiple logic and   |    |
|     | runtime errors. Instruct students to apply scientific debugging techniques, such as binary  |    |
|     | search debugging, to identify and resolve the issues methodically   |    |
|     | Objective: To apply object-oriented programming (OOP) principles in Python to model real-   |    |
|     | world scenarios and systems, fostering the development of modular, reusable, and efficient  |    |
|     | solutions. Fostering the ability to design and implement solutions for real-world problems.   |    |
|     | Choose any one real world scenario. Ask student to apply OOP principles such as   |    |
|     | encapsulation, inheritance, and polymorphism in practical scenarios. The sample real world  |    |
| 0.5 | scenarios are as follows.   |    |
| 06  |   | 02 |
|     | 1. Event Management System: Implement an event management system using OOP  |    |
|     | concepts to organize and manage various aspects of college festivals or events. Design  |    |
|     | classes for events, organizers, participants, and activities. Include methods for event   |    |
|     | registration, scheduling, participant management, and activity coordination.  |    |
|     | 2. Online Shopping System: Develop classes for products, customers, and shopping carts. Include methods for adding items to the cart, calculating total costs, processing orders,   |    |
|     | and managing inventory.   |    |
|     |   |    |

3. Vehicle Rental System: Design a system using classes for vehicles, rental agencies, and rental transactions. Implement methods to handle vehicle availability, rental periods, pricing, and customer bookings. **Objective:** To develop a graphical user interface (GUI) application for any use case. Choose any use case from below. 1. GUI for Developing Conversion Utilities: Develop a Python GUI application that performs various unit conversions such as currency (Rupees to Dollars), temperature (Celsius to Fahrenheit), and length (Inches to Feet). The application should include input fields for the values, dropdown menus or buttons to select the type of conversion, and labels to display the results. 2. GUI for Calculating Areas of Geometric Figures: Develop a Python GUI application that calculates the areas of different geometric figures such as circles, rectangles, and triangles. Allows users to input the necessary dimensions for various geometric figures and calculate their respective areas. The application should include input fields for the dimensions, buttons to perform the calculations, and labels to display the results. 3. College Admission Registration Form: The college admission registration form collects essential personal, educational, and contact information from prospective students. Create a GUI as shown in Figure-1 that allows the user to input his/her name, branch and favorite game. When the user clicks the Submit button, it should display the output as 07 02 illustrated. TK Enter Student Name: Virat Select Your Branch: Computer Engineering ○ Information Technology Select Favorite Games: Cricket Football □ Badminton Submit **OUTPUT:** Your name is Virat. Virat is from Computer Engineering Department. Virat is from Computer Engineering Department and enjoy playing Cricket. Figure-1: A basic GUI featuring text field and various buttons. **Objective:** To enable learners to effectively utilize regular expressions in Python for pattern matching, validation, and data extraction tasks, enhancing their ability to process textual data efficiently and accurately. 1. Script to Validate Phone Number and Email ID \*: Write a Python script that prompts the user to enter their phone number and email ID. It then employs Regular Expressions to verify if these inputs adhere to standard phone number and email address formats 2. Password Strength Checker: Write a Python script that prompts the user to enter a password. Use regular expressions to validate the password based on these criteria: At 08 02 least 8 characters long, Contains at least one uppercase letter, one lowercase letter, one digit, and one special character. 3. **URL Validator:** Develop a script that verifies if a given string is a valid URL. Use regular expressions to check for standard URL formats, including protocols (http, https), domain names, and optional path segments. Test with various URLs and ensure the validation covers common cases. 4. Extracting Data from Text \*: Create a program that reads a text file containing various data (e.g., names, emails, phone numbers). Use regular expressions to extract specific

|    | types of data, such as email addresses, phone numbers, dates (e.g., MM/DD/YYYY format).   |    |
|----|---|----|
| 09 | Objective: To equip learners with the skills to utilize the NumPy libraries for efficient numerical computing.  1. Creating and Manipulating Arrays*: Write a Python program to create a 1D, 2D, and 3D NumPy array. Perform basic operations like reshaping, slicing, and indexing.  2. Array Mathematics*: Develop a Python script to create two arrays of the same shape and perform element-wise addition, subtraction, multiplication, and division. Calculate the dot product and cross product of two vectors.  3. Statistical Operations*: Write a Python program to calculate mean, median, standard deviation, variance, and correlation coefficients of a given array.   | 02 |
| 10 | Objective: To provide learners with the knowledge and skills necessary to effectively use the Pandas library for data manipulation and the Matplotlib library for data visualization. Learners will engage in tasks that involve analyzing real-world datasets, creating meaningful visualizations, and drawing insights from data.  Following task should be performing on a real-world dataset:  Task1- Loading and Inspecting Data: Load a CSV file containing information on global COVID-19 cases into a DataFrame. Display the first few rows, check the data types, and summarize basic statistics.  Task 2- Data Cleaning: Identify and handle missing values in the dataset. Remove any duplicate rows and ensure data consistency.  Task 3-Data Aggregation: Perform aggregation operations to summarize data.  Task 4- Plotting graphs: Generate a line plot showing the trend / bar plot to compare data/ histogram to show distribution/ scatter plot to examine relationships between variables.  Instructors can choose other datasets relevant to the course objectives. Sample datasets and task list are as follows.  1. Using the Iris Data (https://www.kaggle.com/datasets/saurabh00007/iriscsv), perform the following tasks:  Read the first 8 rows of the dataset.  Eili any missing data with the mean value of the respective column.  Remove rows that contain any missing values.  Group the data by the species of the flower.  Calculate and display the mean, minimum, and maximum values of the Sepal length column.  2. Using the Cars Data (https://www.kaggle.com/datasets/nameeerafatima/toyotacsv) perform the following tasks:  Create a scatter plot between the Age and Price of the cars to illustrate how the price decreases as the age of the car increases.  Generate a histogram to show the frequency distribution of kilometers driven by the cars. | 02 |
|    | Create a pie chart to represent the percentage distribution of cars based on fuel types.  Draw a box plot to visualize the distribution of car prices across different fuel types.  |    |

Note: \* Marks indicate the minimum required programs to be taken. Additional programs should be covered based on the student's learning pace.

The goal of these experiments is to provide a structured approach to learning Python programming concepts. Instructors are encouraged to use these samples as a foundation and customize them to create engaging and effective learning experiences for the students.

#### **Assessment:**

**Term Work:** Term Work shall consist of at least 15 to 18 practicals based on the above list. Since the initial Python programs are small and straightforward, this allows for more practicals to be conducted, providing essential practice needed for mastering any programming language.

**Internal Practical Exam:** Conduct an internal practical exam after completing the first three modules of the Python course to assess and ensure the learner's understanding.

**Term Work Marks:** 25 Marks (Total marks) = 10 Marks (Experiment) + 10 Marks (Internal Practical Exam) + 5 Marks (Attendance)

Practical& Oral Exam: An Oral & Practical exam will be held based on the above syllabus.
